QUESTION 1

What is the file scan workflow order when Shared Insight Cache and reputation are enabled?

- A. Symantec Insight > Shared Insight Cache server > local client Insight cache
- B. Local client Insight cache > Shared Insight Cache server > Symantec Insight
- C. Shared Insight Cache server > local client Insight cache > Symantec Insight
- D. Local client Insight cache > Symantec Insight > Shared Insight Cache server

Correct Answer: B

QUESTION 2

What is a characteristic of a Symantec Endpoint Protection (SEP) domain?

- A. Each domain has its own management server and database.
- B. Every administrator from one domain can view data in other domains.
- C. Data for each domain is stored in its own separate SEP database.
- D. Domains share the same management server and database.

Correct Answer: D

QUESTION 3

Which two items should an administrator enter in the License Activation Wizard to activate a license? (Select two.)

- A. password for the Symantec Licensing Site
- B. purchase order number
- C. serial number
- D. Symantec License file
- E. credit card number

Correct Answer: CD

QUESTION 4

A Symantec Endpoint Protection (SEP) administrator receives multiple reports that machines are experiencing performance issues. The administrator discovers that the reports happen about the same time as the scheduled LiveUpdate.

Which setting should the SEP administrator configure to minimize I/O when LiveUpdate occurs?

- A. Change the LiveUpdate schedule
- B. Change the Administrator-defined scan schedule
- C. Disable Allow user-defined scans to run when the scan author is logged off
- D. Disable Run an Active Scan when new definitions arrive

Correct Answer: D

QUESTION 5

After several failed logon attempts, the Symantec Endpoint Protection Manager (SEPM) has locked the default admin account. An administrator needs to make system changes as soon as possible to address an outbreak, but the admin account is the only account. Which action should the administrator take to correct the problem with minimal impact to the existing environment?

- A. wait 15 minutes and attempt to log on again
- B. restore the SEPM from a backup
- C. run the Management Server and Configuration Wizard to reconfigure the server
- D. reinstall the SEPM

Correct Answer: A
