QUESTION 1

Which is a requirement for performing attack detection by use of anomaly detection technologies?

- A. Baseline data
- B. Packet captures
- C. Syslog data
- D. Exploit signatures

Correct Answer: A

QUESTION 2

A company has these requirements for access to their wireless and wired corporate LANs using 802.1x:

Client devices that are corporate assets and have been joined to the Active Directory domain are allowed access.

Personal devices must not be allowed access.

Clients and access servers must be mutually authenticated.

Which solution meets these requirements?

- A. Protected Extensible Authentication Protocol/Microsoft Challenge Handshake Authentication Protocol Version 2 with user authentication
- B. Extensible Authentication Protocol-Transport Layer Security with machine authentication
- C. Extensible Authentication Protocol-Transport Layer Security with user authentication
- D. Protected Extensible Authentication Protocol/Microsoft Challenge Handshake Authentication Protocol Version 2 with machine authentication

Correct Answer: B

QUESTION 3

Which action can identify and monitor denial of service attacks?

- A. Deploy access control lists that match well-known attack vectors
- B. Deploy deep packet inspection appliances
- C. Select attack counter-measures
- D. Establish normal network characteristics

Correct Answer: D

QUESTION 4

You are working on a network design for Customer A. This design should consider fast convergence features, and it was agreed that BFD should be used for faster link-transition detection. Which three options apply to the use of the echo function in BFD? (Choose three.)

- A. It can be used with asynchronous mode.
- B. BFD control packets are not required.
- C. It can be enabled individually in each direction.
- D. It has the advantage of testing the forwarding path on the remote system.
- E. The rate of periodic transmission of BFD control packets should be increased.

Correct Answer: ACD

QUESTION 5

A large enterprise customer has more than 300 worldwide locations, each with at least two different WAN connections to their five regional data centers across US, Europe, and Asia. These data centers offer different application services and work as primary, with a remote data center as backup. You must provide a solution to securely select the traffic path for specific applications based on an IT policy.

Which solution allows the easiest management of the path decision from the data center sites?

- A. Apply policy-based routing at each remote site
- B. Use LISP over the current WAN
- C. Set up each center with its own AS and use BGP AS-PATH prepend configuration
- D. Add Cisco MPLS TE devices in the data centers and activate Cisco MPLS TE

Correct Answer: B
