QUESTION 1

You have an Exchange Server 2013 organization. The organization contains a Mailbox server that hosts several databases, including a database named ExecsDB. ExecsDB contains the mailboxes of the company executives.

The hard disk that contains ExecsDB fails.

You replace the hard disk with a new disk, and then you mount the database.

You create a recovery database in an alternate location, and then you restore the database files for ExecsDB to the alternate location.

You need to ensure that all data is consistent before merging the mailbox data into the dial- tone database.

What should you do first?

- A. Run the isinteg.exe command and specify the -fix parameter.
- B. Run the Move-ActiveMailboxDatabase cmdlet.
- C. Run the Update-MailboxDatabaseCopy cmdlet.
- D. Run the eseutil.exe command and specify the/R parameter.

Correct Answer: A

QUESTION 2

Your network contains an Active Directory forest. The forest contains a single domain named fabrikam.com.

You have an Exchange Server organization that contains four servers. The servers are configured as shown in the following table.

Server name	Role	Exchange Server version
EX1	Client Access	Exchange Server 2010
EX2	Mailbox	Exchange Server 2010
EX3	Client Access	Exchange Server 2013
EX4	Mailbox	Exchange Server 2013

You plan to enable Outlook Anywhere for all users. You plan to configure the users to connect to the name oa.fabrikam.com. The IP address of oa.fabrikam.com points to EX3.

You need to ensure that users on EX2 and EX4 can access their mailbox by using Outlook Anywhere.

Which command should you run on EX1 and EX3? (To answer, drag the appropriate cmdlets to the correct servers. Each cmdlet may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to

view content.)

Select and Place:

Correct Answer:

QUESTION 3

A user fails to connect to his mailbox by using Outlook Anywhere. The user successfully connects to the mailbox by using an Exchange ActiveSync-enabled mobile device and Outlook Web App.

You need to identify what prevents the users from connecting to the mailbox by using Outlook Anywhere.

Which tool should you use?

- A. Microsoft Outlook Connectivity Test
- B. Microsoft Exchange RPC Extractor

Answer Area

When a server in the crganization receives an email message from the Internet, the server will [answer choice].

male a shadow sopy of the message on another server reject the email message and send a non-delivery report (NDR) to the serder silertly reject the email message

If an Exchange server s unavailable for [answer choice] the Exchange server that holds the shadow copy of nessages for that server will become the primary server for those email messages.

Correct Answer:

Answer Area

When a server in the crganization receives an email message from the Internet, the server will [answer choice].

If an Exchange server s unavailable for **[answer choice]** the Exchange server that holds the shadow copy of messages for that server will become the primary server for those email messages.

QUESTION 5

Your network contains an Active Directory forest. The forest contains a single domain named contoso.com. You have an Exchange Server 2013 organization named Contoso. You plan to create an additional SMTP domain named sales.contoso.com. You will use sales.contoso.com as the primary SMTP address for the users in the sales department.

You create a new email address policy and apply the policy to the sales users.

New sales users report that when they attempt to access their email from the Internet for the first time by using Microsoft Outlook 2010, they fail to connect. The sales users connect to their mailbox internally successfully by using Outlook

2010. All other users can connect to their mailbox from the Internet and internally.

You need to ensure that the new sales users can connect to the Exchange Server 2013 organization by using Outlook Anywhere from the Internet.

Which two actions should you perform? (Each correct answer presents part of the solution.

Choose two.)

A. Modify each existing Service Connection Point (5CP) object in Active Directory to point to autodiscover.sales.contoso.com.

https://www.lead4pass.com/70-341.html

2021 Latest lead4pass 70-341 PDF and VCE dumps Download

- B. From DNS Manager, create a host (A) record for autodiscover.sales.contoso.com.
- C. On the Client Access servers, deploy a new certificate that includes the autodiscover.sales.contoso.com name.
- D. Create a new Autodiscover virtual directory on the Client Access servers and configure ExternalURL to use autodiscover.sales.contoso.com.
- E. Create a new Service Connection Point (SCP) object in Active Directory that points to autodiscover.sales.contoso.com.

Correct Answer: BC
