QUESTION 1

You are writing a method to compress an array of bytes. The bytes to be compressed are passed to the method in a parameter named document. You need to compress the contents of the incoming parameter. Which code segment should you use?

- A. `MemoryStream inStream = new MemoryStream(document);GZipStream zipStream = new GZipStream (inStream, CompressionMode.Compress); byte[] result = new byte[document.Length];zipStream.Write (result, 0, result.Length); return result;`
- B. `MemoryStream stream = new MemoryStream(document);GZipStream zipStream = new GZipStream (stream, CompressionMode.Compress);zipStream.Write(document, 0, document.Length);zipStream.Close ();return stream.ToArray();`
- C. `MemoryStream outStream = new MemoryStream();GZipStream zipStream = new GZipStream(outStream, CompressionMode.Compress);zipStream.Write(document, 0, document.Length);zipStream.Close();return outStream.ToArray();`
- D. `MemoryStream inStream = new MemoryStream(document);GZipStream zipStream = new GZipStream (inStream, CompressionMode.Compress); MemoryStream outStream = new MemoryStream();int b;while ((b = zipStream.ReadByte()) != -1) { outStream.WriteByte((byte)b);} return outStream.ToArray();`

Correct Answer: C

QUESTION 2

You are developing an application that will use custom authentication and role-based security. You need to write a code segment to make the runtime assign an unauthenticated principal object to each running thread.Which code segment should you use?

- A. `AppDomain domain = AppDomain.CurrentDomain;domain.SetPrincipalPolicy(PrincipalPolicy.WindowsPrincipal);`
- B. `AppDomain domain = AppDomain.CurrentDomain;domain.SetThreadPrincipal(new WindowsPrincipal (null));`
- C. `AppDomain domain = AppDomain.CurrentDomain; domain.SetAppDomainPolicy(PolicyLevel.CreateAppDomainLevel());`
- D. `AppDomain domain = AppDomain.CurrentDomain;domain.SetPrincipalPolicy(PrincipalPolicy.UnauthenticatedPrincipal);`

Correct Answer: D

QUESTION 3

You create Web-based client applications. You are creating a data access component. Several Web user controls will use the component to populate bound controls from a data source. The data source has end-user inputs. You need to ensure that the data source communicates all relevant information to the Web user controls that call your component. How should you accomplish this goal?

- A. When the data access component makes a successful call to the data source, raise and throw an exception to the Web user controls to indicate success.

- B. When the data access component makes an unsuccessful call to the data source, raise and throw an exception to the Web user controls to indicate failure.
- C. When the data access component makes a successful call to the data source, raise and throw an exception to the Web page to indicate success.
- D. When the data access component makes an unsuccessful call to the data source, handle it internally by using the data access component to indicate failure.

Correct Answer: B

QUESTION 4

You create Web-based client applications. You identify a reusable software component that you need to use in your application. The component contains functionality to retrieve data from a database. However, the component does not include the functionality to change the color of a table cell when the user moves the mouse cursor into the cell. You need to add the effect of mouse cursor movement to the component in the most efficient way possible. What should you do?

- A. Create a new component that inherits from the existing component. Add the extended functionality of mouse cursor movement to the new component.
- B. Create a COM+ wrapper for the reusable software component. Add the extended functionality of the mouse cursor movement in the wrapper.
- C. Create a new component and make the existing component inherit from the new component. Add the extended functionality of the mouse cursor movement to the new component.
- D. Create your own custom reusable software component. Add the extended functionality of the mouse cursor movement to the new component.

Correct Answer: A

QUESTION 5

You create Web-based client applications. You are reviewing a Web application page that populates a list of all employees of your company. You analyze code and find that the Web application page does not prevent exceptions from traveling to the browser. You need to ensure that the Web application page intercepts exceptions and presents an error message to the browser. What change should you suggest?

- A. Add the following code segment to the Web.config file.
- B. Add the following code segment to the page. `protected void Page_Error(object sender, EventArgs e) { Response.Redirect("error.aspx"); }`
- C. Add the following code segment to the Web.config file.
- D. Change the load event handler to the following code segment. `protected void Page_Load(object sender, EventArgs e) { try { LoadEmployees(); } Catch { Response.Redirect("error.aspx"); } }`

Correct Answer: B
