QUESTION 1

Rachel needs to enable her XPages application for multi-language use. Where should she go to enable localization?

- A. It is not possible to enable localization at application-level in XPages.
- B. In Lotus Notes, open up the Application Properties and on the Advanced tab click '\\Enable localization\\'
- C. In Domino Designer, open up the Application Properties and on the Advanced tab click '\\Enable localization\\'
- D. In Domino Designer, open up the Application Properties and on the XPages tab click '\\Enable localization\\'

Correct Answer: D

QUESTION 2

John wishes to add a Java Class to his XPages application. How would he do this?

- A. Expand his application in the "Applications Navigator" and create a new Java Script Library and place the necessary Java logic within that script library?
- B. Switch to the Java Perspective, navigate to the "Local" Java Source Folder within the application (using the Package Explorer), and create the Java Class within that folder
- C. Switch to the Java Perspective and create a new Java Source Folder within the application (using the Package Explorer), and create the Java Class within that folder
- D. Expand his application in the "Applications Navigator" and create a new Java Agent, place the necessary Java logic within the agent, and call the agent from within the XPage

Correct Answer: C

QUESTION 3

Dominic wants to implement the open source CSS framework called Blueprint in his XPages application. He does not want to include any other CSS framework resources which may exist on the Domino server. What is the best way to include all of the required CSS files in the XPages in his application?

- A. In each XPage in the application add the required CSS files to the Resources section
- B. Create a new theme which extends webstandard and then add each Blueprint CSS file via a resource definition
- C. Create a new theme which extends oneui and then add each Blueprint CSS file via a resource definition
- D. Create a new theme which does not have an extension property and then add each Blueprint CSS file via a resource definition

Correct Answer: D

QUESTION 4

David has an XPage designed to view a document. He is adding a Delete button, but he wants to add some client-side browser JavaScript to make a confirm dialog appear containing the document Subject field. How would he retrieve the Subject field value?

- A. `var subject = "#{javascript: dominoDoc.getItemValueString(\\'Subject\\')}";confirm("Subject: "+subject+"\nAre you sure you want to delete this document?");`
- B. `var subject = dominoDoc.getItemValueString(\\'Subject\\');confirm("Subject: "+subject+"\nAre you sure you want to delete this document?");`
- C. `var subject = "#{id:dominoDoc.getItemValueString(\\'Subject\\')}";confirm("Subject: "+subject+"\nAre you sure you want to delete this document?");`
- D. `var subject = XSP.xhr("#{id:Subject}");confirm("Subject: "+subject+"\nAre you sure you want to delete this document?");`

Correct Answer: A

QUESTION 5

Titus has created a JSON string that he will pass to the browser. What method could he use to convert the string to an object?

- A. `dijit.fromJson()`
- B. `dojo.fromJson()`
- C. `dojo.toJson()`
- D. `dijit.toJson()`

Correct Answer: B
