QUESTION 1

You work as a Web Application Developer for SunInfo Inc. The company uses Visual Studio 2008 as its application development platform. You create a Windows Forms application using .NET Framework 3.5. You add a button control to a form named form1. You want to retrieve more information about the mouse event. You use the MouseClick event in your application. Which of the following parameters will you pass to the event handler of the MouseClick event?

- A. An object parameter representing the sender of the event and an instance of KeyEventArgs
- B. An object parameter representing the sender of the event and an EventArgs parameter
- C. An object parameter representing the sender of the event and an instance of KeyPressEventArgs
- D. An object parameter representing the sender of the event and an instance of MouseEventArgs

Correct Answer: D

QUESTION 2

You work as a Software Developer for ABC Inc. The company uses Visual Studio.NET 2005 as its application development platform. You are creating a .NET remoting application using .NET Framework 2.0. The object of the application will be shared by multiple applications. You want to use simple, modular, extensible, and XML-based protocol to exchange messages between remoting applications. What will you do to accomplish the task?

- A. Use the SOAP protocol.
- B. Use the SoapFormatter class.
- C. Use the BinaryFormatter class.
- D. Use client activated objects.

Correct Answer: B

QUESTION 3

You work as a Software Developer for ABC Inc. The company uses Visual Studio .NET 2005 as its application development platform. You are developing an application using .NET Framework 2.0. You are required to use a datatype that will store only the numbers. The numbers should be in positive form and should not be larger than 65,535. Which of the following datatypes will you use to accomplish the task?

Each correct answer represents a complete solution. Choose two.

- A. int
- B. short
- C. System.UInt16
- D. ushort

E. System.Int16

Correct Answer: CD

QUESTION 4

You work as a Software Developer for HiTech Inc. You develop a Web application named

MyWebApp. The application contains several Web pages that display a registration form for a user. You want to perform user input data validation at the server-side, so that you can disable the client-side data input validation. Which of the following actions will you take to accomplish the task?

- A. Set the CausesValidation property of a server control to false.
- B. Set the Enabled property of a validation control to true.
- C. Set the Enabled property of a validation control to false.
- D. Set the EnableClientScript property of a validation control to true.
- E. Set the EnableClientScript property of a validation control to false.

Correct Answer: E

QUESTION 5

You work as a Software Developer for ABC Inc. The company uses Visual Studio .NET 2005 as its application development platform. You create an application for the company. You need to validate the phone number passed to a class as a parameter in the application. Which of the following is the most effective way to verify that the format of the data matches a phone number?

- A. Regular expressions
- B. Nested If statements
- C. Use the String.Length property
- D. A try/catch block

Correct Answer: A
