QUESTION 1

You work as a Software Developer for ABC Inc. The company uses Visual Studio.NET 2008 as its application development platform. You create an ASP.NET Web application using the .NET Framework 3.5. The application is used to map HTTP requests to HTTP handlers based on a file name extension. You need to ensure that each HTTP handler processes individual HTTP URLs or groups of URL extensions in the application.

Which of the following built-in HTTP handlers will you use to accomplish this task?

Each correct answer represents a part of the solution. Choose all that apply.

- A. Generic Web handler (*.ashx)
- B. Generic handler (*.ashx)
- C. Web service handler (*.asmx)
- D. ASP.NET page handler (*.aspx)
- E. Trace handler (trace.axd)

Correct Answer: ACDE

QUESTION 2

You work as a Software Developer for ABC Inc. The company uses Visual Studio .NET 2005 as its application development platform. You have created an application for the company. The application uses string concatenation to gather data from multiple email messages, and format the data before displaying it. You want to ensure that the data displays as quickly as possible. Which of the following actions will you take to accomplish the task?

- A. Write code that uses the Concat() method of the String object.
- B. Write code that uses the Substring() method of the String object.
- C. Write code that uses the plus-sign (+) operator to concatenate the strings.
- D. Write code that uses the Append() method of the StringBuilder object.

Correct Answer: D

QUESTION 3

Ryan works as a Software Developer for Mansoft Inc. He creates an ASP.NET Web application named MyWebApplication using Visual Studio .NET 2005. MyWebApplication performs validation on XML files in a directory. Whenever a new XML file appears in the directory, MyWebApplication opens the file, checks it for validation, and updates it accordingly. Ryan wants to ensure that each update performed on XML files is logged in the Web application log. He creates a String object named Var1, to store the message to be logged. Which of the following will he use to accomplish the task?

Each correct answer represents a part of the solution. Choose two.

- A. The Trace.WriteLine method
- B. The EventLog.WriteEntry method
- C. The EventLog.EventLogSource property
- D. The EventLog.Source property

Correct Answer: BD

QUESTION 4

You work as a Database Administrator for ABC Inc. The company has a SQL Server 2000 computer. One of the databases on the server contains a table named Employees, for storing information about employees in the company. There are two employees, Joe and Rick, to whom you want to give additional responsibilities. You want Joe to be allowed to modify only the E-mail column of the table, and Rick should be allowed to modify only the Salary column of the table. Neither Joe nor Rick should be allowed to have permission on the Employees table.

You want to ensure that the above rule is followed strictly. What will you do to accomplish this?

- A. Create a user-defined function to modify data.
- B. Create a RULE on both the columns.
- C. Create a stored procedure to modify data
- D. Create a CHECK constraint on both the columns.

Correct Answer: C

QUESTION 5

Which of the following data structures is used for storing reference data types?

- A. Stack
- B. Queue
- C. Hard disk
- D. Heap

Correct Answer: D
