### QUESTION 1

You have installed the Knowledge Center with Windows authentication mode. Select the statement that is true about authentication and authorization of the Knowledge Center.

- A. Authentication of the Knowledge Center is done through Microsoft Windows.
- B. Authorization of the Knowledge Center is done through Microsoft Windows.
- C. The username of the Windows authentication user can be updated in the Knowledge Center.
- D. User information in the Knowledge Center database is used to authenticate users.

Correct Answer: A

---

### QUESTION 2

When the Knowledge Center is configured for single sign-on (SSO), authentication is done through SSO. However, the Knowledge Center will continue to authorize users by mapping the SSO user information to the Knowledge Center user information.

Select two statements that are true about the configuration of the Knowledge Center to map the user Information.

- A. Change the UserHeaderLogin setting to true in the web.config file.
- B. Install the Knowledge Center as Windows authentication, and then the Windows user Information will be mapped to the Knowledge Center user information.
- C. Edit the customHeaders.xml file to map HTTP headers to the Knowledge Center user Information.
- D. Configure the SSO server to map the SSO user's username and password to the Knowledge Center user's username and password.
- E. Configure the SSO server policy to allow "SSO Authenticate and authorize" on both KCenter and KData virtual directories so that the HTTP Header info will be mapped to both virtual directories.

Correct Answer: AC

---

### QUESTION 3

You are installing the Knowledge Center on a secure website. The Installer defaults to the website. Identify two benefits of using a secure website for the Knowledge Center implementation.

- A. Secure sockets layer (SSL) secures communication from the Knowledge Center web server to the database server so that the data is encrypted between the two servers.
- B. The SSL Certificate is proof that the Knowledge Center server is what it says it is Customers feel safe knowing that the server is really legitimate.
- C. Without SSL, the user password will be sent as the original user input text to the Knowledge Center server.

D. SSL makes conversion private. The authentication data (username and password, and session cookies) is encrypted across networks.

E. SSL protects the KCenter and Kcontent virtual directory: it is not used to protect the Kdata virtual directory.

Correct Answer: AC

---

#### QUESTION 4

When Installing the Knowledge Center using the Standard authentication, you are prompted for both a username and password for the initial Knowledge Center administrator- However, when installing using Windows authentication, you are prompted only for a Windows user account username for the initial Knowledge Center administrator.

Identify two reasons that explain this difference.

A. Using Windows authentication, the username Information is stored in the database, but the password will always be prompted for at runtime.

B. Using Standard authentication, the installer will verify that there is not a Windows user account on the local computer that already exists with the login credentials provided.

C. Using Windows authentication, Windows account usernames are added to the Knowledge Center database, and login authentication is performed by Microsoft Windows, with the system checking the account under which the user has logged in to the local computer, which means that the password has already been validated at runtime.

D. Using Windows authentication, the installer will reset the password of the selected Windows user account on the local computer to blank. Therefore, logging in at runtime will never require a password.

E. Using Standard authentication, login authentication information (both user name and password) is stored in the Knowledge Center database and is validated when entered at runtime.

F. Using standard authentication, Microsoft Windows cannot perform the login authentication of the windows user account on the local computer. Therefore, the username and password will have to be prompted for at runtime.

Correct Answer: CE

---

#### QUESTION 5

Because of a network outage, the connection with the server drops and Developer switches to offline mode. You have a topic checked out and open in the editor and you made changes to this topic.

What happens to the changes?

A. Because going offline occurred unexpected, my changes are lost and I have to wait until the server is accessible again and redo my work.

B. My changes are not lost, but I need to save my topic and apply the changes again after the server available.

C. All changes are saved in the local data storage. After the server is available, checking in the topic will save the latest version on the server.

D. Restart Developer so it will go back to online mode and start over again making changes to the topic.

Correct Answer: C
