QUESTION 1

Which two statements are true when running DBMS_CLOUD.COPY_DATA? (Choose two.)

A. The source file can be in either Oracle Standard Storage or Oracle Archive Storage bucket in the Object Store.

B. The source files can reside inOracle Object Storage, Amazon S3 Object storage, or Azure Blob storage.

C. A valid credential must be created prior to running the DBMS_CLOUD.COPY_DATA procedure.

D. The source file will be automatically removed after the DBMS_CLOUD.COPY_DATA procedure finishes successfully.

E. The target table will be created in Autonomous Database if it does not already exist.

Correct Answer: BC

QUESTION 2

The Oracle Autonomous Database dedicated Exadata infrastructure feature is based upon which Oracle Cloud resources?

A. Oracle Machine Learning Zeppelin Notebook, Autonomous Exadata Infrastructure, Fleet Administrator, Database Administrator,

B. Virtual Cloud Network, Compartments, Policies, Autonomous Exadata Infrastructure

C. Autonomous Exadata Infrastructure, Autonomous Backup, Autonomous Container Database, Autonomous Database

D. Fleet Administrator, Database Administrator, Database User, Autonomous Exadata Infrastructure

Correct Answer: C

Explanation: https://docs.oracle.com/en/cloud/paas/autonomous-database/atpfg/components.html#GUID268B36E1-87D8-4649-A370-226E2AE3FC5C

QUESTION 3

Which two statements are true about accessing Autonomous Database Tools?

A. Access to Database Actions is available for all users of Autonomous Database.

B. Oracle Machine Learning is available only with Autonomous Data Warehouse (ADW) Database.

C. SQL Developer Web is available exclusively on the Autonomous Database.

D. Database Actions is accessible from a server running on the same virtual cloud network (VCN) when the Autonomous Database is configured with Private Endpointnetworking.

E. Oracle APEX can be accessed only from the Developer menu in the Service Console.

Correct Answer: DE

QUESTION 4

Which statement is not correct when the Autonomous Database is stopped?

A. In-flighttransactions queries are stopped

B. Tools are no longer able to connect to a stopped instance

C. User with DWROLE can still access the database

D. CPU billing is halted

Correct Answer: C

QUESTION 5

Your customer has upgraded their on premise 11.2 database to 12.2. During this migration the database was migrated to a pluggable database and is now in production. How should the customer unplug their database to migrate to Autonomous Database (ADB)?

A. Pluggable databases cannot be migrated to ADB using plug, unplug or clone.

B. Create a database link from source databaseto the ADB environment and clone the PDB.

C. Unplug to an xml file so database files and xml file can be uploaded to object storage.

D. Unplug into a pdb archive which can be uploaded to object storage.

Correct Answer: A

Since an ADB database hassome restrictions on the object types and Oracle Database Options you need to use a logical migration method rather than a physical one.

The main migration tool for migrating to ADB is Data Pump. You can export your schemas and import them into ADB usingData Pump. To sync up the additional/incremental changes on the source database during the export/import process you can use GoldenGate or GoldenGate Cloud Service to replicate those changes to ADB.

In the current release you cannot use physical migrationmethods like backup/restore, Data Guard, Pluggable/Unplug , database clones, and transportable tablespaces to move your existing database to ADB.
