- D. 7
- E. 15

Correct Answer: C

QUESTION 3

Which personal Cisco TelePresence unit can be used as a replacement for a person's computer monitor on their desk?

- A. EX90
- B. MX800
- C. TX9000
- D. SX10
- E. SX80

Correct Answer: A

QUESTION 4

Which profile must be added to the end user profile when enabling an end user for Cisco Unified Presence?

- A. device profile
- B. UC service profile
- C. extension mobility profile
- D. SIP profile

Correct Answer: B

QUESTION 5

Refer to the exhibit.

Alarms	
Alarm	Description
<input type="checkbox"/> Configuration warning	Expected default link between the Default Subzone and the Cluster Subzone is missing
<input type="checkbox"/> Configuration warning	Expected default link between the Default Subzone and the Default Zone is missing
<input type="checkbox"/> Configuration warning	Expected default link between the Default Subzone and the Traversal Subzone is missing
<input type="checkbox"/> Configuration warning	Expected default link between the Traversal Subzone and the Default Zone is missing

Which CLI command should be run to resolve these alarms on a Cisco VCS?

- A. xcommand DefaultValuesSet
- B. xconfiguration DefaultLinksAdd
- C. xcommand DefaultLinksAdd
- D. xconfiguration DefaultValuesSet

Correct Answer: C

Complete these steps in order to troubleshoot the issue on any VCS through which the call passes, which includes any VCS to which the endpoints are registered:

1.

Navigate to VCS Configuration > Bandwidth > Links and verify that links exist between the subzones and zones (that are involved in the call) over which the call can be routed. You might need to manually add the necessary links or restore the default links. In order to complete this process, enter the xcommand DefaultLinksAdd command into the CLI.

2.

If the links exist, click each link name in order to reach the Edit Link page. In the Status section, check the current number of calls in progress on the link. These calls might have consumed all of the available bandwidth.

3.

Check the bandwidth limitations on any pipes that are applied to the links in order to verify that there is sufficient bandwidth to place a call.
