<http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/evn/configuration/xe-3s/evn-xe-3s-book/evn-overview.html> Virtual Network Tag Each VPN and associated EVN has a tag value that you assign during configuration. The tag value is global, meaning that on each router, the same EVN must be assigned the same numerical tag value. Tag values range from 2 to 4094. An EVN is allowed on any interface that supports 802.1q encapsulation, such as Fast Ethernet, Gigabit Ethernet, and port channels. To allow for backward compatibility with the VRF-Lite solution, the vLAN ID field in the 802.1q frame is used to carry the virtual network tag. "The tag value is global, meaning that on each router, the same EVN must be assigned the same numerical tag value" <http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/evn/configuration/xe-3s/evn-xe-3s-book/evnoverview.html#GUID-F46F2A10-3CAD-43D5-95FE-2D8A079AE4B5> The VNET tag is a global value and thus VNs on each EVN device should be provisioned with the same tag value. The valid tag value range is from 2 to 4094. EVN is supported on any interface that supports 802.1q encapsulation, for example, an Ethernet interface http://www.cisco.com/c/en/us/products/collateral/ios-nx-os-software/layer-3-vpnl3vpn/whitepaper_c11-638769.html
