**QUESTION 1**

While reviewing the Event Logs on the Session Manager, you notice an ALERT message: (OP\_AFW17504) "SIP firewall white list configuration failed, retaining existing configuration." Which action should you perform when you see this alert?

- A. Access the SIP firewall white list configuration and verify that the configuration is correct.
- B. Access the SIP firewall configuration and change the RULE log type to none to not have these ALERTS appear in the EVENT logs.
- C. Access the SIP firewall configuration and Load the ASM Default Configuration.
- D. Disregard these messages as they are sent to the Event Logs and do not generate alarms.

Correct Answer: A

---

**QUESTION 2**

Type :  Local  Remote

\* Remote Server IP : 135.124.228.111

\* Remote Server Port : 22

\* User Name : training

\* Password : \*\*\*\*\*

\* File Name : /tmp/backup  Use Default

When performing a remote backup of system Manager data the administrator is asked for a user name and password. Which statement best explains why a user name and password are required?

- A. The backed-up data file is encrypted. The username and password are used in encryption process and subsequently to access the file on restoring backed up data.
- B. The backed-up data is stored on a remote server using SCP. The user name and password are used to login remote server.
- C. Because System Manager Date is being exported from the server for security and authentication purpose system Manager once again checks the administrator's credentials.
- D. All System Manager Data is backed up to common storage repository setup during installation. For system Manager to access the repository the correct user name and password must be supplied.

Correct Answer: B

---

**QUESTION 3**

Which header in the request is considered by Session Manager when it is trying to match a dialed number?

- A. Session Manager attempts to match the FROM header of a request to a defined dial pattern.
- B. Session Manager attempts to match to the header of a request to a defined dial pattern.
- C. Session Manager attempts to match the request-URI header of a request to a defined dial.
- D. Session Manager attempts to match the ROUTE header of a request to a defined dial pattern.

Correct Answer: C

**QUESTION 4**

The screenshot shows a user profile creation interface with two main sections: 'Identity' and 'Communication Profile'. The 'Identity' section includes fields for Last Name, First Name, Middle Name, Description, Login Name, Authentication Type (set to Basic), Password, and Confirm Password. The 'Communication Profile' section includes fields for Communication Profile Password and Confirm Password. Both the 'Password' and 'Confirm Password' fields in the 'Identity' section, and the 'Communication Profile Password' and 'Confirm Password' fields in the 'Communication Profile' section, are highlighted with red boxes. Below the 'Communication Profile' section, there are buttons for 'New', 'Delete', 'Done', and 'Cancel', and a 'Name' field.

When creating a New User Profile, an administrator is asked to enter, two separate passwords for the new user. Which statement best describes the need for two different passwords?

- A. The Identity password is used in authenticating the user when accessing the user's management console, while the Communication Profile is used to authenticate the user when logging in on a telephone.
- B. The Communication Profile is the prime password for authenticating the user while the Identity password is a backup password used to reset the Communication Profile in cases where the prime password is forgotten.
- C. The Identity password is used when logging in to a telephone that connected to the corporate network while the Communication Profile is used while logging in with a VPN telephone or the corporate network.
- D. The Identity password is used when logging into a telephone in to a communication profile password enables further privileges and capability.

Correct Answer: A

## QUESTION 5

Which two functionalities does the SIP firewall provide to protect Session Manager from SIP flood attack? (Choose two.)

- A. Removing the suspected source
- B. Rate Limiting
- C. Blocking the Entity Link
- D. Rate Blocking

Correct Answer: BD
