QUESTION 1

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment that contains 8,000 client computers.

When a custom application named App1.exe is installed on a computer, a registry value of App1=TRUE is added to the registry. App1 is installed on approximately half of the computers.

You need to recommend a solution for creating a collection named Collection1 that contains only computers on which App1.exe is installed. The solution must minimize administrative effort.

What should you include in the recommendation?

- A. a collection that has a direct membership rule
- B. a configuration item
- C. the custom client device settings
- D. a software category

Correct Answer: A

Membership rule of the direct rule type let you choose the users or computers that you want to add as members to a collection. This rule gives you direct control over which resources are members of the collection. This membership does not change unless a resource is removed from Configuration Manager. Configuration Manager must have discovered the resources or you must have imported the resources before you can add them to a direct rule collection. Direct rule collections have a higher administrative overhead than query rule collections because you must make changes to this collection type manually.

QUESTION 2

You deploy Windows 8.1 by using Operating System Deployment (OSD). The deployment task sequence contains steps to install software updates and applications.

The amount of time required to deploy the Windows 8.1 image has increased significantly during the last six months.

You need to recommend a solution to reduce the amount of time it takes to deploy the image.

What should you recommend?

- A. Synchronize software updates before deploying the image.
- B. Use offline servicing for the image.
- C. Create a new automatic deployment rule.
- D. Add an additional Install Software Updates step to the deployment task sequence.

Correct Answer: B

Configuration Manager 2012: Offline Servicing for Operating System Images In Configuration Manager 2012 there is a new feature for applying updates to operating system images while they are in the Configuration Manager library. This

means any operating system image you see in the Operating Systems > Operating Systems Images node from the Software Library wunderbar can be updated with Component Based Servicing (CBS) updates. By updating an image in the Software Library instead of performing a new build and capture of the operating system image you will gain a few distinct advantages. You will be able to reduce the risk of vulnerabilities during operating system deployments and reduce the overall operating system deployment to the end user. You will also reduce the administrative effort to maintain your operating system images.

The feature is applicable for Component Based Servicing (CBS) updates and for the following operating systems:

QUESTION 3

You have a System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) deployment.

You are creating a custom security role named Role1.

You need to ensure that users to whom Role1 is assigned can create and deploy configuration baselines.

Which two permissions should you modify for Role1? To answer, select the appropriate permissions in the answer area.

Hot Area:

Copy Security Role

Specify details for the customized copy of the selected security role.

Name:

Description:

Based on:

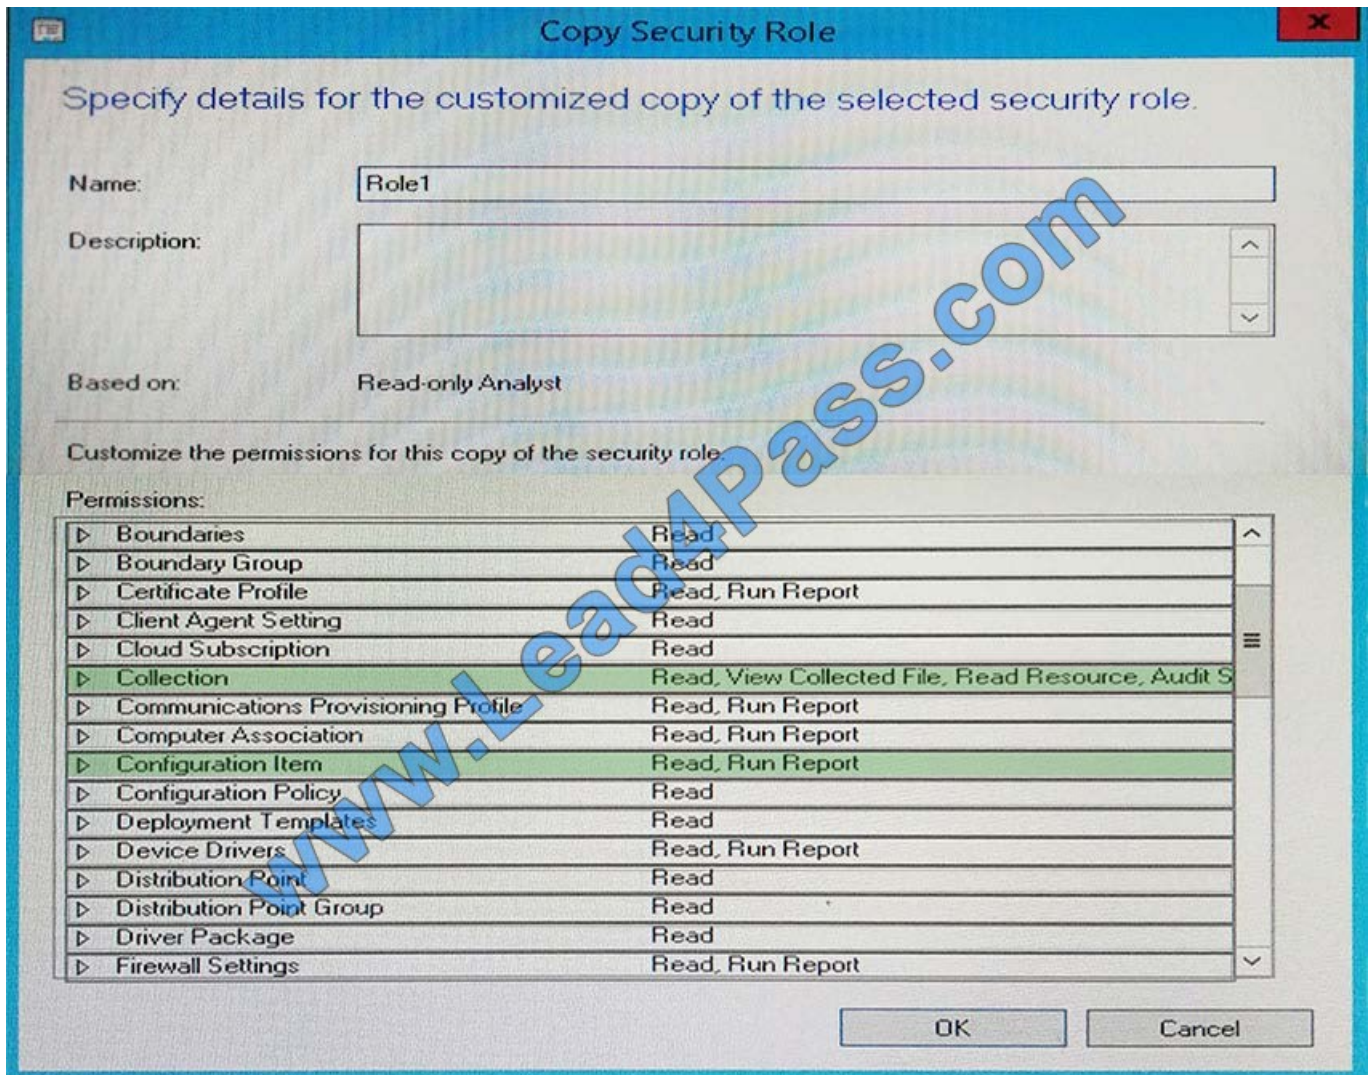

Customize the permissions for this copy of the security role.

Permissions:

▶ Boundaries	Read
▶ Boundary Group	Read
▶ Certificate Profile	Read, Run Report
▶ Client Agent Setting	Read
▶ Cloud Subscription	Read
▶ Collection	Read, View Collected File, Read Resource, Audit S
▶ Communications Provisioning Profile	Read, Run Report
▶ Computer Association	Read, Run Report
▶ Configuration Item	Read, Run Report
▶ Configuration Policy	Read
▶ Deployment Templates	Read
▶ Device Drivers	Read, Run Report
▶ Distribution Point	Read
▶ Distribution Point Group	Read
▶ Driver Package	Read
▶ Firewall Settings	Read, Run Report

OK Cancel

Correct Answer:

QUESTION 4

Your network contains a System Center 2012 Configuration Manager environment.

You write the following query:

```
Select SYS.Name from SMS_R_System SYS
```

```
Join SMS_G_System_ADD_REMOVE_PROGRAMS ARP
```

```
On ARP.ResourceID = SYS.ResourceID
```

You need to create a list of all the client computers that have a version of Microsoft Office installed.

What should you add to the query?

A. where ARP.DisplayName like "Microsoft Office**"

- B. where ARP.DisplayName = "Microsoft Office*"
- C. where ARP.DisplayName like "Microsoft Office%"
- D. where ARP.DisplayName = "%Microsoft Office"

Correct Answer: C

You need to use "LIKE" not "=" otherwise the WildCard "%"is seen as a real identifier.

QUESTION 5

You network has System Center Configuration Manager 2007 R3 deployed. The Active Directory schema is extended for System Center Configuration Manager 2007 R3.

You plan to deploy System Center 2012 R2 Configuration Manager Service Pack 1 (SP1) to a new server.

You need to ensure that System Center 2012 R2 Configuration Manager SP1 can publish information to Active Directory.

Which container's permissions should you modify?

- A. System\Policies
- B. System\IP Security
- C. System\System Management
- D. System\WMIPolicy

Correct Answer: C

The Publishing Status shown in the Active Directory Forests list view is a status summary of all sites in the hierarchy. The status will show "Failed" if any sites in the hierarchy failed to publish to the forest. To view published site information, open Active Directory Users and Computers, connect to a domain controller in the forest, and go to View-> Advanced Features. Site and management point information is published under the System-> System Management node.
