### QUESTION 1

Your company has a main office and four branch offices. The main office contains a server named Server1 that runs Windows Server 2012 R2.

The IP configuration of each office is configured as shown in the following table.

Office name	Network ID	Router address
Main	10.10.0.0/22	10.10.0.1
Branch1	172.16.18.0/24	172.16.18.1
Branch2	172.16.17.0/24	172.16.17.1
Branch3	172.16.16.0/24	172.16.16.1
Branch4	172.16.19.0/24	172.16.19.1

You need to add a single static route on Server1 to ensure that Server1 can communicate with the hosts on all of the subnets. Which command should you run?

- A. `route.exe add -p 10.10.0.0 mask 255.255.252.0 10.10.0.1`
- B. `route.exe add -p 172.16.16.0 mask 255.255.252.0 10.10.0.1`
- C. `route.exe add -p 10.10.0.0 mask 255.255.252.0 172.16.0.0`
- D. `route.exe add -p 172.16.18.0 mask 255.255.252.0 10.10.0.1`

Correct Answer: B

These parameters will allow communication with all the hosts.

CIDR prefix-length	Dotted-Decimal	# Individual Addresses	# of Classful Networks
/13	255.248.0.0	512 K	8 Bs or 2048 Cs
/14	255.252.0.0	256 K	4 Bs or 1024 Cs
/15	255.254.0.0	128 K	2 Bs or 512 Cs
/16	255.255.0.0	64 K	1 B or 256 Cs
/17	255.255.128.0	32 K	128 Cs
/18	255.255.192.0	16 K	64 Cs
/19	255.255.224.0	8 K	32 Cs
/20	255.255.240.0	4 K	16 Cs
/21	255.255.248.0	2 K	8 Cs
/22	255.255.252.0	1 K	4 Cs
/23	255.255.254.0	512	2 Cs
/24	255.255.255.0	256	1 C
/25	255.255.255.128	128	1/2 C
/26	255.255.255.192	64	1/4 C
/27	255.255.255.224	32	1/8 C

## QUESTION 2

Your network contains an Active Directory forest named contoso.com.

The forest contains two domains named contoso.com and child.contoso.com and two sites named Site1 and Site2. The domains and the sites are configured as shown in following table.

Domain controller name	Domain name	Site name	Role
DC1	Contoso.com	Site1	Global catalog RID master PDC emulator
DC2	Contoso.com	Site1	Domain naming master Schema master Infrastructure master
DC3	Child.contoso.com	Site1	Infrastructure master RID master PDC emulator
DC4	Child.contoso.com	Site2	Not applicable

When the link between Site1 and Site2 fails, users fail to log on to Site2.

You need to identify what prevents the users in Site2 from logging on to the child.contoso.com domain.

What should you identify?

- A. The placement of the global catalog server
- B. The placement of the infrastructure master
- C. The placement of the domain naming master
- D. The placement of the PDC emulator

Correct Answer: D

The exhibit shows that Site2 does not have a PDC emulator. This is important because of the close interaction between the RID operations master role and the PDC emulator role. The PDC emulator processes password changes from earlier-version clients and other domain controllers on a best-effort basis; handles password authentication requests involving passwords that have recently changed and not yet been replicated throughout the domain; and, by default, synchronizes time. If this domain controller cannot connect to the PDC emulator, this domain controller cannot process authentication requests, it may not be able to synchronize time, and password updates cannot be replicated to it. The PDC emulator master processes password changes from client computers and replicates these updates to all domain controllers throughout the domain. At any time, there can be only one domain controller acting as the PDC emulator master in each domain in the forest.

### QUESTION 3

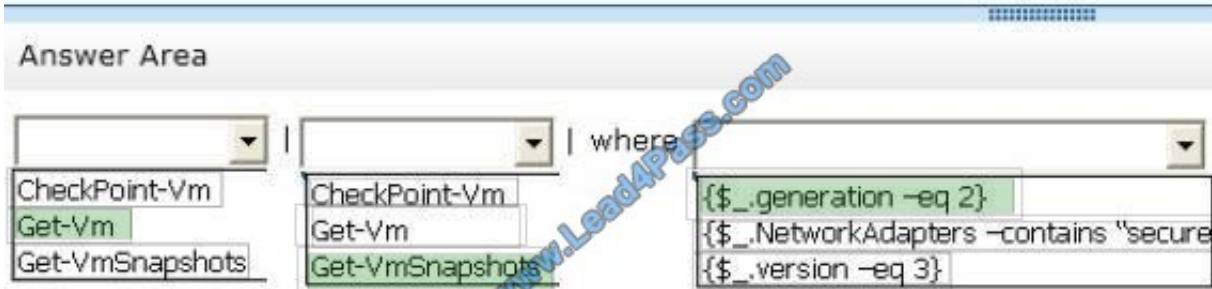

You have a Hyper-V host named Server1 that runs Windows Server 2012 R2. Server1 hosts 50 virtual machines. You need to create a script to list all of the virtual machines that have checkpoints and support Secure Boot.

What should you do? To answer, select the appropriate options in the answer area.

Hot Area:

```
Get-Checkpoint-Vm | Get-Vm | where {$_.generation -eq 2} | {$_.NetworkAdapters -contains 'secure'} | {$_.version -eq 3}
```

Correct Answer:

#### QUESTION 4

Your network contains an Active Directory domain named contoso.com. The DNS zone for contoso.com is Active-Directory integrated.

The domain contains 500 client computers. There are an additional 20 computers in a workgroup.

You discover that every client computer on the network can add its record to the contoso.com zone.

You need to ensure that only the client computers in the Active Directory domain can register records in the contoso.com zone.

What should you do?

- A. Sign the contoso.com zone by using DNSSEC.
- B. Configure the Dynamic updates settings of the contoso.com zone.
- C. Configure the Security settings of the contoso.com zone.
- D. Move the contoso.com zone to a domain controller that is configured as a DNS server.

Correct Answer: B

#### QUESTION 5

You work as an administrator at Contoso.com. The Contoso.com network consists of a single domain named Contoso.com. All servers in the Contoso.com domain have Windows Server 2012 R2 installed.

You have logged on to a server, named ENSUREPASS-SR07, and would like to obtain the IP configurations of a server, named ENSUREPASS-SR13.

Which of the following actions should you take?

- A. You should consider making use of the Winrs.exe command.
- B. You should consider making use of the Winsat.exe command.

C. You should consider making use of the Winpop.exe command.

D. You should consider making use of the Dsrn.exe command.

Correct Answer: A
