**QUESTION 1**

You have a server named Server1 that runs Windows Server 2012 R2.

You need to create shares by using the New Share Wizard- The solution must meet the following requirements;

A share named Share1 must have access-based enumeration enabled for the files and folders in the share.

A share named Share2 must encrypt remote access to the files in the share.

Which share profile should you use for each share? To answer, drag the appropriate share profiles to the correct shares. Each share profile may be used once, more than once, or not at all. You may need to drag the split bar between panes

or scroll to view content.

Select and Place:

**Share Profiles**

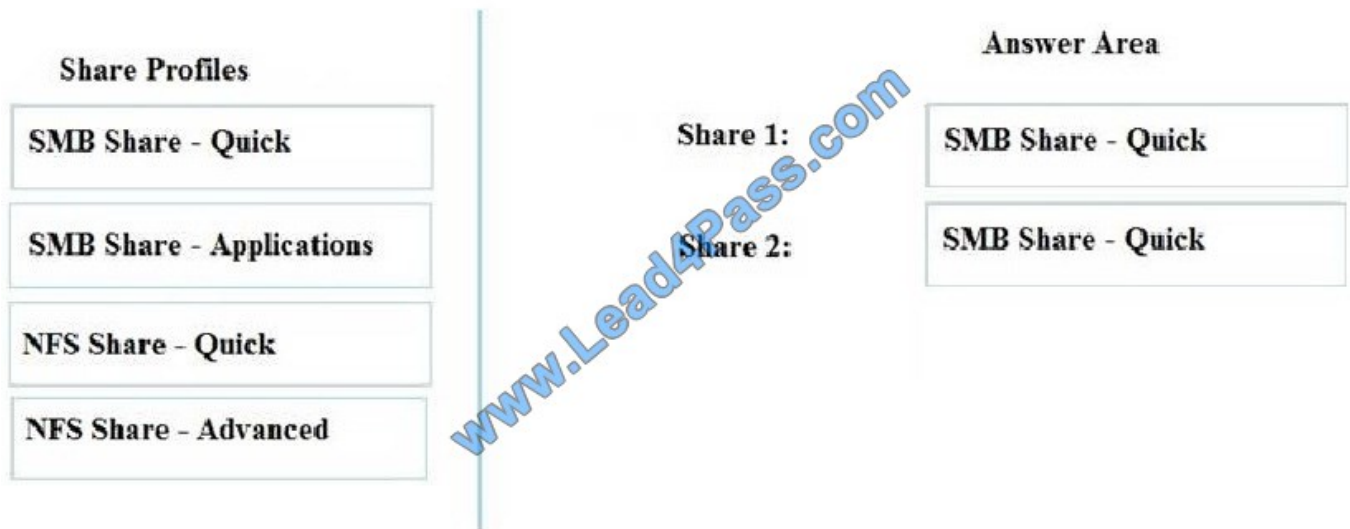

- SMB Share - Quick
- SMB Share - Applications
- NFS Share - Quick
- NFS Share - Advanced

**Answer Area**

Share 1:

Share 2:

Correct Answer:

\* Share1

To be able to share folders on Windows Server 2012, you must first use the Add Roles and Features wizard to install the File Server role service.

On the File and Storage Services page, select Shares and then click Tasks –andgt; New Share ... to begin the New Share Wizard.

On the Select the profile for this share page, select SMB Share – Quick and click the Next button.

On the Select the server and path for this share page, select the server on which to create the new share ( local or remote server ) and the volume on which to create the new shared folder. Click theNext button to continue.

On the Specify share name page, type the name of your new Share name and click the Next button to continue.

On the Configure share settings page, you will find advanced options for configuring Access-Based Enumeration (ABE), Offline folder caching, and Encryption of end-to-end SMB network traffic.

\* Share2

SMB Encryption

Provides end-to-end encryption of SMB data and protects data from eavesdropping occurrences on untrusted networks.

## QUESTION 2

You have a server named Server1 that runs Windows Server 2012 R2. Server1 has the Hyper-V server role installed. On Server1, you create a virtual machine named VM1. VM1 has a legacy network adapter.

You need to assign a specific amount of available network bandwidth to VM1.

What should you do first?

- A. Remove the legacy network adapter, and then run the Set-VMNetworkAdapter cmdlet.
- B. Add a second legacy network adapter, and then run the Set-VMNetworkAdapter cmdlet.
- C. Add a second legacy network adapter, and then configure network adapter teaming.
- D. Remove the legacy network adapter, and then add a network adapter.

Correct Answer: D

Add a New network adapter. The legacy network adapter doesn't support bandwidth management.

---

### QUESTION 3

RODC comes with a number of features that focus on heightened security with limited functionality to remote office users. Which of the following are features of RODC?

- A. Filtered Attribute Sets
- B. Read-Only DNS
- C. Unidirectional Replication
- D. All of these

Correct Answer: A

---

### QUESTION 4

Your network contains several servers that run Windows Server 2012 R2 and client computers that run Windows 8.1.

You download several signed Windows PowerShell scripts from the Internet.

You need to run the PowerShell scripts on all of the servers and all of the client computers.

What should you modify first?

- A. The environment variables on all of the servers
- B. The execution policy on all of the servers
- C. The execution policy on all of the client computers
- D. The environment variables on all client computers

Correct Answer: C

The default execution policy of Windows Server 2012 is RemoteSigned meaning that as long as a valid signature is used on the scripts, they will run. However, the client computers have a default execution policy of restricted meaning that no scripts will run in PowerShell whatsoever, so this would have to be changed before the scripts could be executed on the client computers.

---

## QUESTION 5

You work as a senior administrator at Contoso.com. The Contoso.com network consists of a single domain named Contoso.com. All servers on the Contoso.com network have Windows Server 2012 R2 installed.

You are running a training exercise for junior administrators. You are currently discussing printer pooling.

Which of the following is TRUE with regards to printer pooling? (Choose all that apply.)

- A. Printers in a pool must be of the same model, and use the same printer driver.
- B. Each printer in the pool must have a different printer driver.
- C. Printer ports used in the pool must be of the same type.
- D. The types of printer ports used in the pool must be mixed.
- E. Pooled printers appear to workstations as a single printer.
- F. A minimum of three printers are required to configure a printer pool.

Correct Answer: AE

You can create a printing pool to automatically distribute print jobs to the next available printer. A printing pool is one logical printer connected to multiple printers through multiple ports of the print server. The printer that is idle receives the next document sent to the logical printer. This is useful in a network with a high volume of printing because it decreases the time users wait for their documents. A printing pool also simplifies administration because multiple printers can be managed from the same logical printer on a server.
