### QUESTION 1

Your network contains an Active Directory forest named contoso.com that contains a single domain. The forest contains three sites named Site1, Site2, and Site3.

Domain controllers run either Windows Server 2008 R2 or Windows Server 2012 R2.

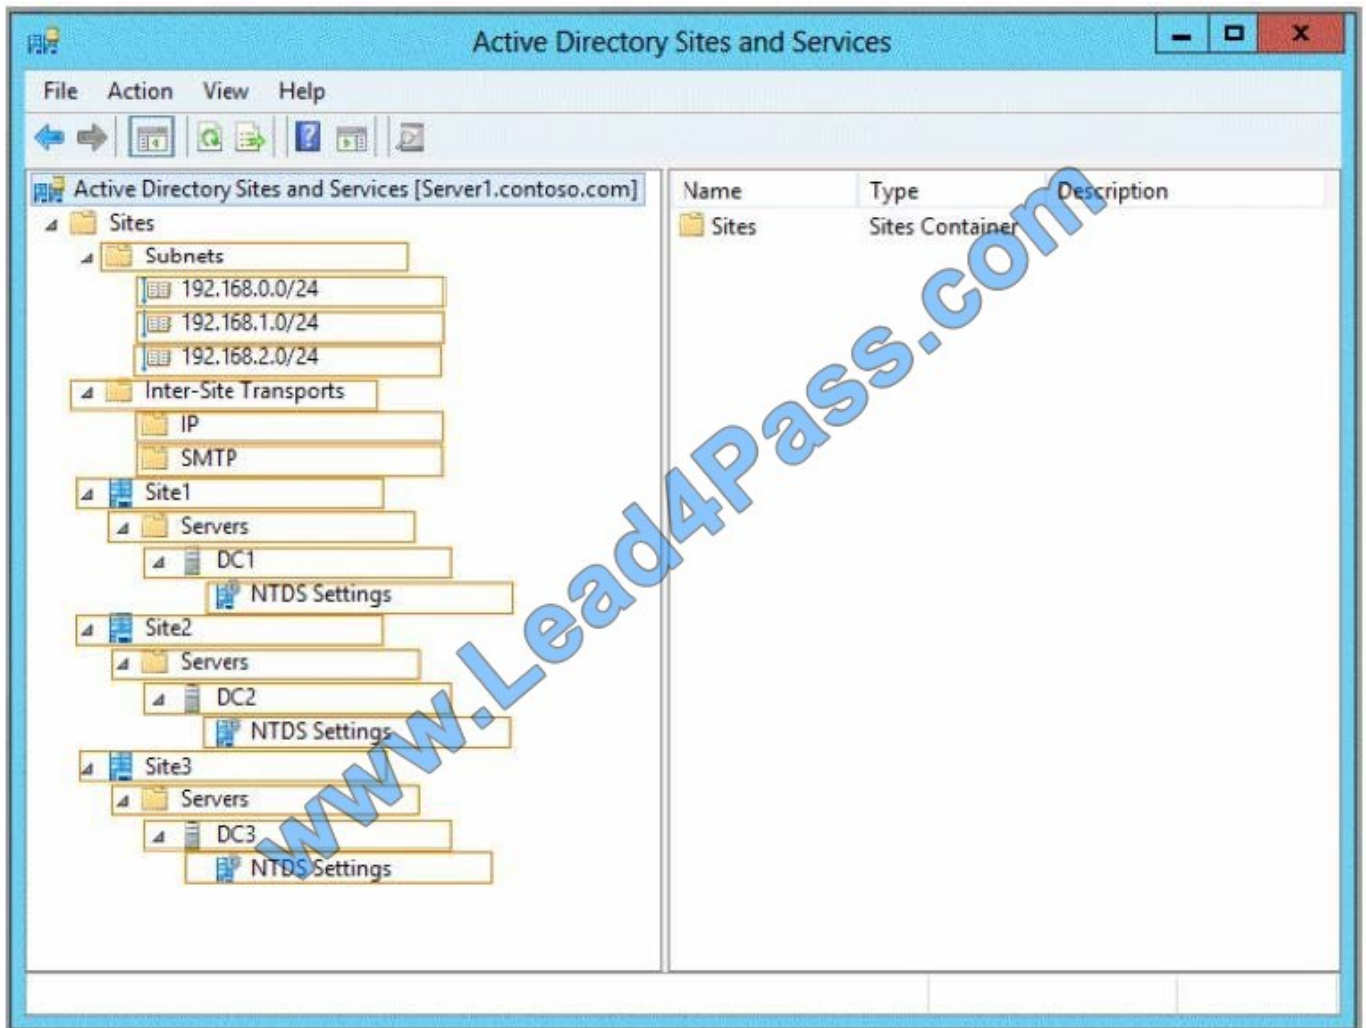

Each site contains two domain controllers. Site1 and Site2 contain a global catalog server.

You need to create a new site link between Site1 and Site2. The solution must ensure that the site link supports the replication of all the naming contexts.

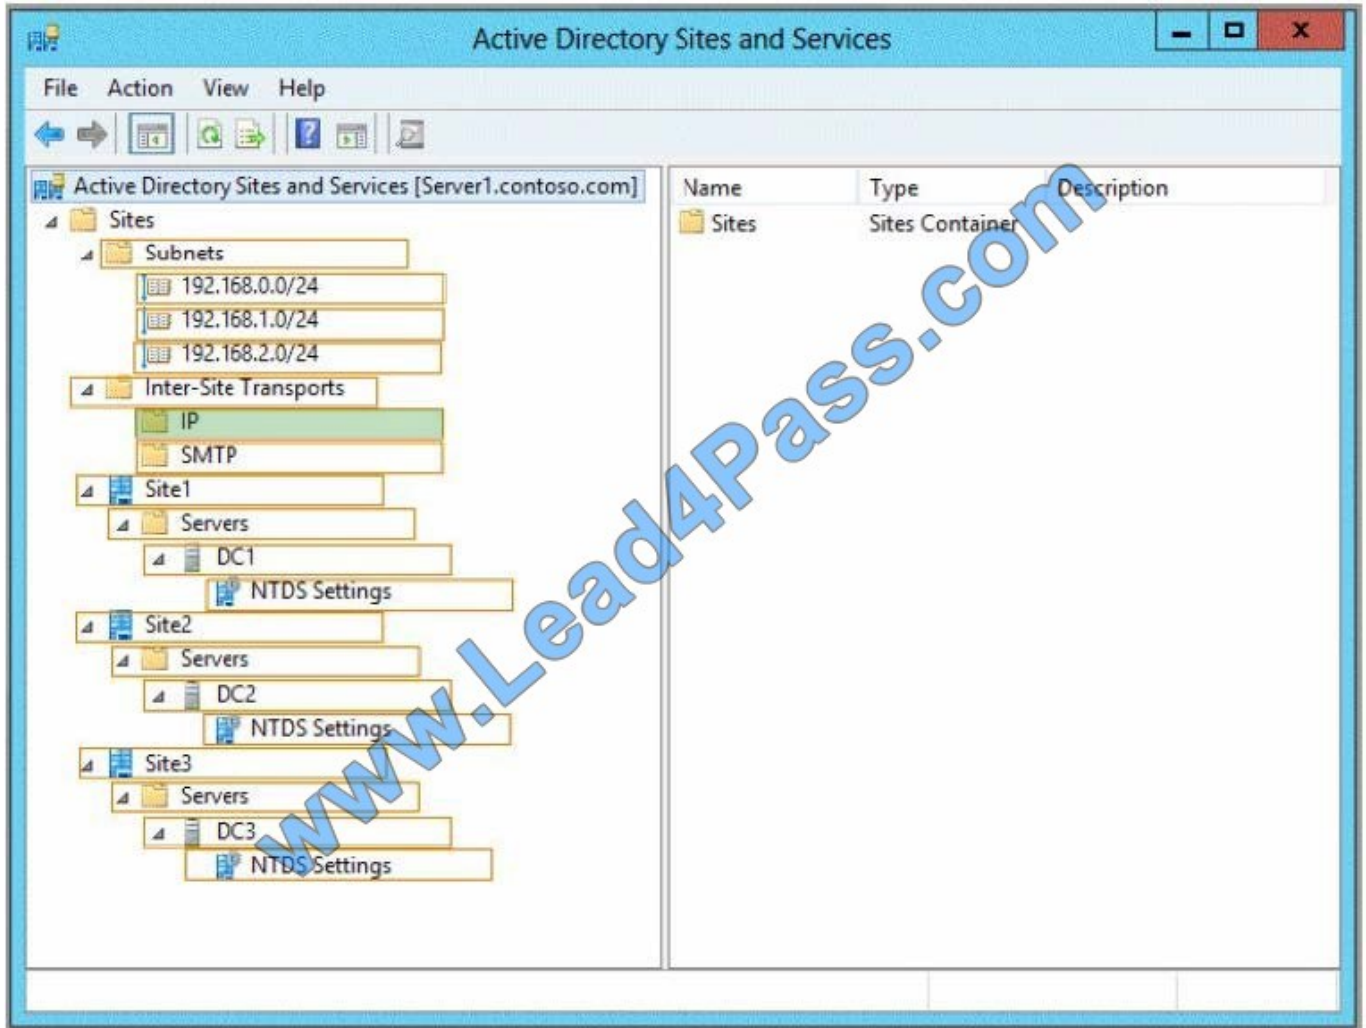

From which node should you create the site link?

To answer, select the appropriate node in the answer area.

Hot Area:

Correct Answer:

Explanation/Reference:

Create a Site Link

To create a site link

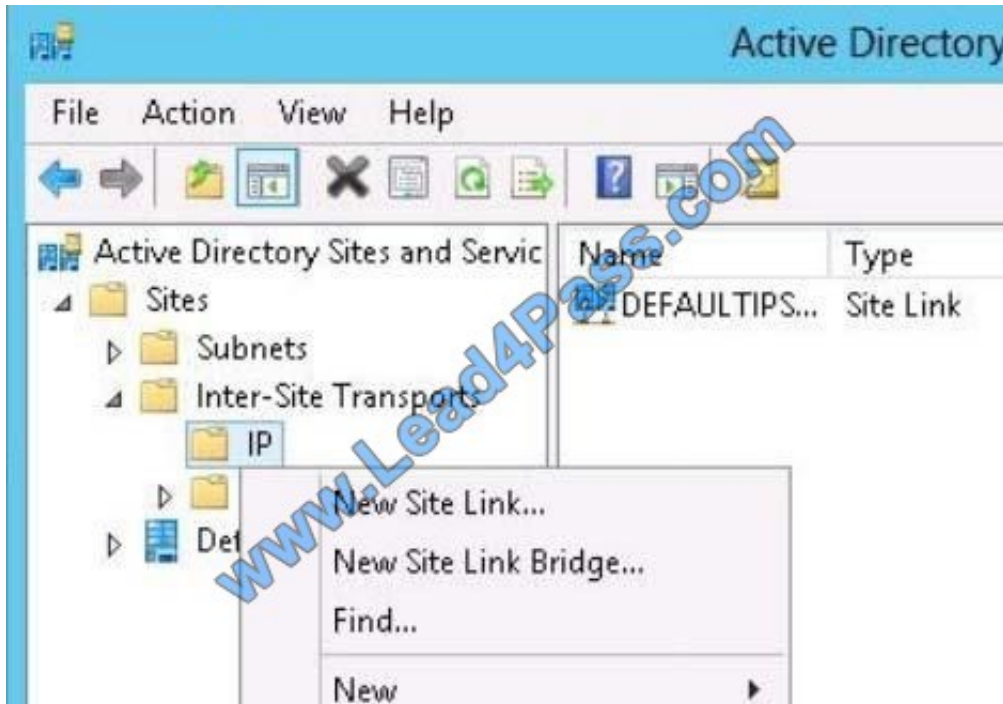

Open Active Directory Sites and Services. To open Active Directory Sites and Services, click Start, click Administrative Tools, and then click Active Directory Sites and Services.

To open Active Directory Sites and Services in Windows Server® 2012, click Start, type dssite.msc.

In the console tree, right-click the intersite transport protocol that you want the site link to use.

Use the IP intersite transport unless your network has remote sites where network connectivity is intermittent or end-to-end IP connectivity is not available. Simple Mail Transfer Protocol (SMTP) replication has restrictions that do not apply to

IP replication.

## QUESTION 2

Your network contains an Active Directory forest named contoso.com. The forest contains a single domain. The forest contains three Active Directory sites named SiteA, SiteB, and SiteC. The sites contain four domain controllers. The domain controllers are configured as shown in the following table.

Site name	Domain controller name
SiteA	DC1, DC2
SiteB	DC3, DC4
SiteC	None

An IP site link exists between each site.

You discover that the users in SiteC are authenticated by the domain controllers in SiteA and SiteB.

You need to ensure that the SiteC users are authenticated by the domain controllers in SiteB, unless all of the domain controllers in SiteB are unavailable.

What should you do?

- A. Create an SMTP site link between SiteB and SiteC.
- B. Create additional connection objects for DC3 and DC4.

- C. Decrease the cost of the site link between SiteB and SiteC.
- D. Create additional connection objects for DC1 and DC2.

Correct Answer: C

By decreasing the site link cost between SiteB and SiteC the SiteC users would be authenticated by SiteB rather than by SiteA. References: <https://technet.microsoft.com/en-us/library/dd277430.aspx#XSLTsection126121120120>

### QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2012 R2. Server1 has the Active Directory Federation Services (AD FS) server role installed.

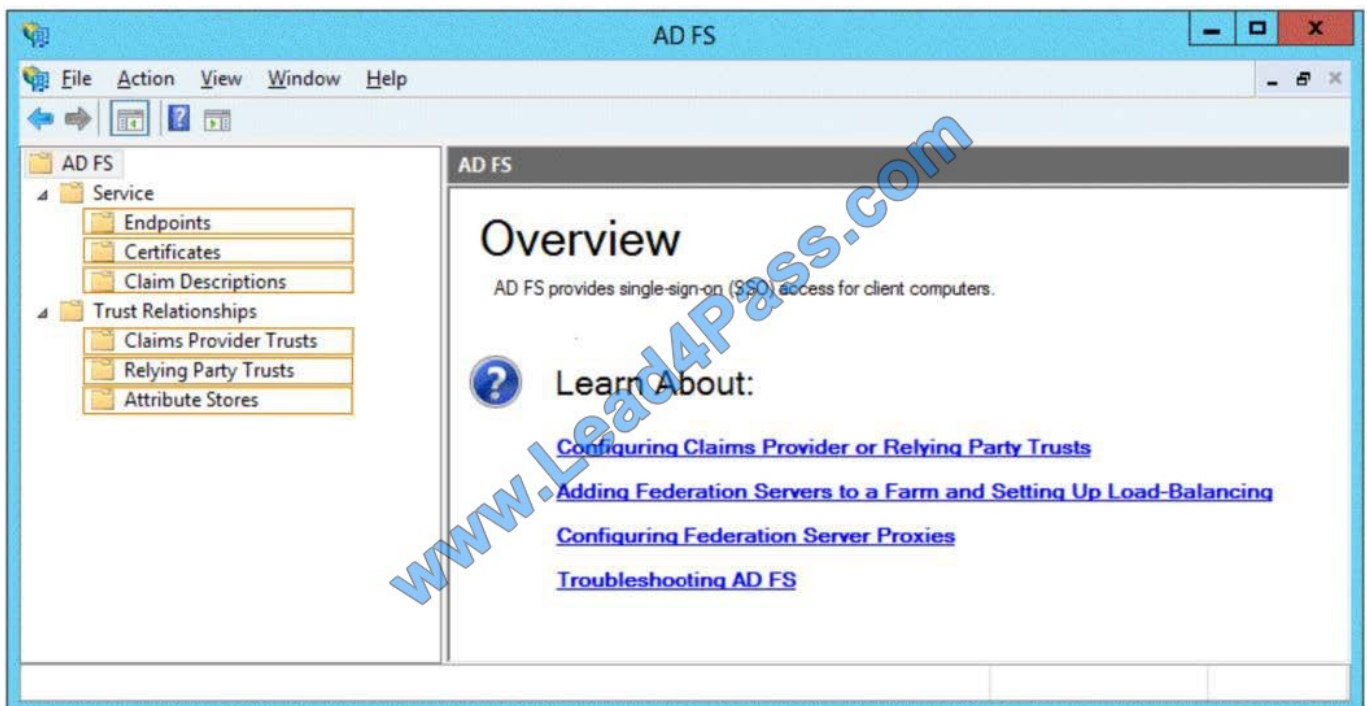

Adatum.com is a partner organization.

You are helping the administrator of adatum.com set up a federated trust between adatum.com and contoso.com. The administrator of adatum.com asks you to provide a file containing the federation metadata of contoso.com.

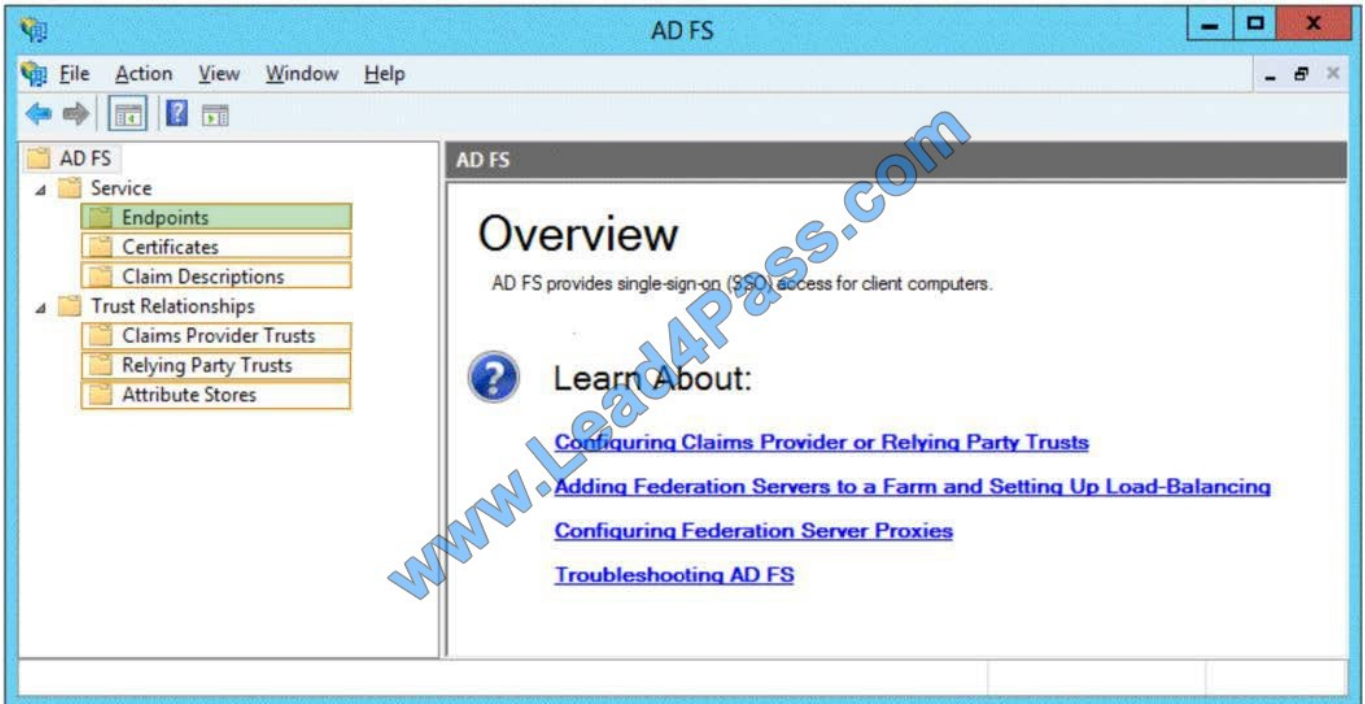

You need to identify the location of the federation metadata file. Which node in the AD FS console should you select?

To answer, select the appropriate node in the answer area.

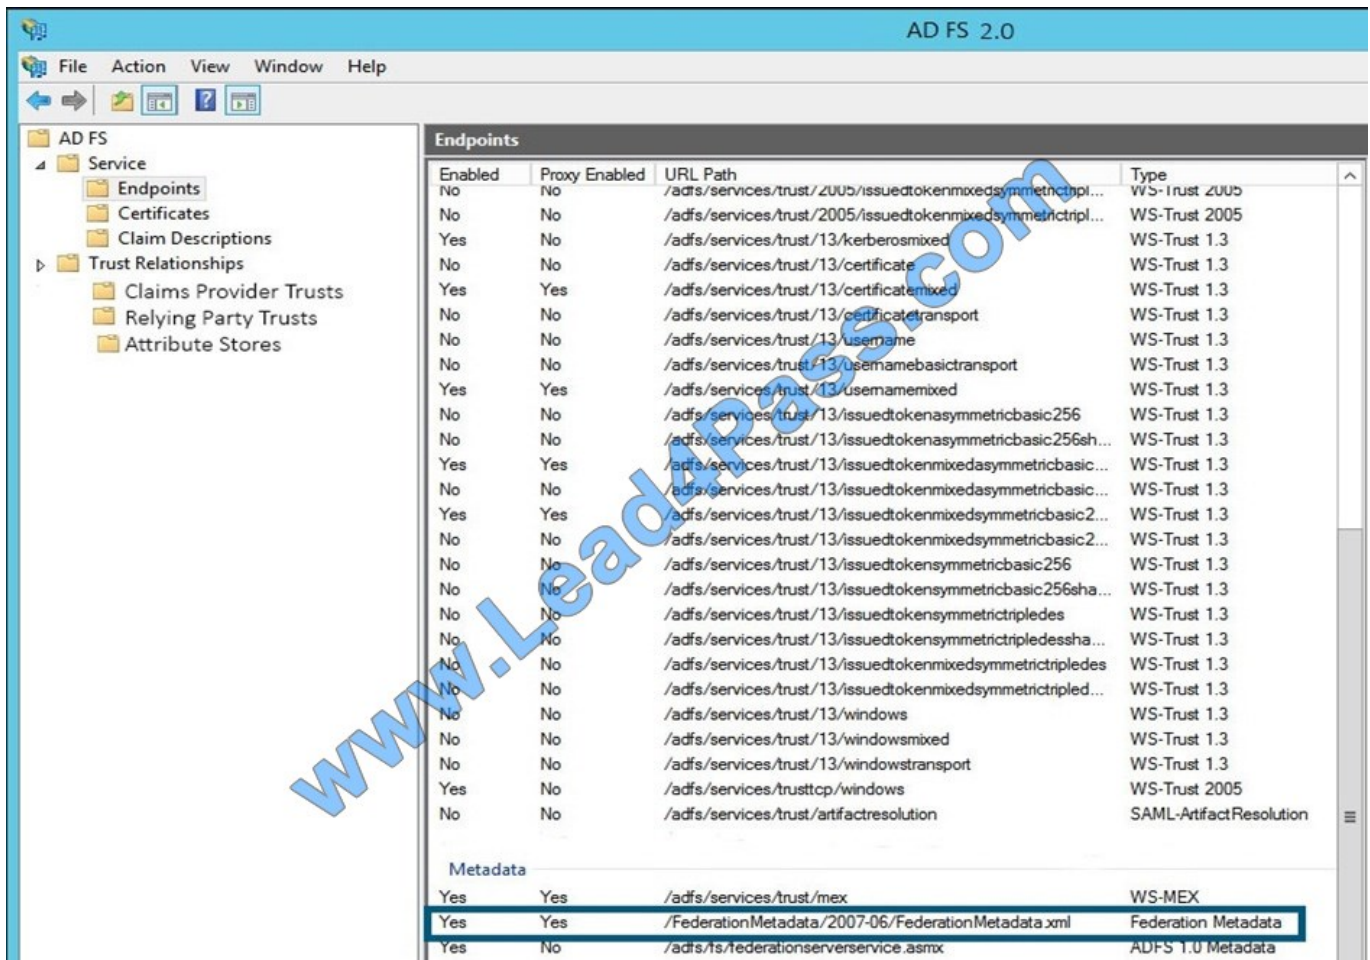

Hot Area:

Correct Answer:

See figure below.

#### QUESTION 4

Which of the following services would you restart on a domain controller if you wanted to trigger a reregistration of the domain controller's \_ldap and \_kerberos SRV records?

- A. DNS Server
- B. Server
- C. Workstation
- D. Netlogon

Correct Answer: D

---

#### QUESTION 5

Your network contains a perimeter network and an internal network. The internal network contains an Active Directory Federation Services (AD FS) infrastructure. The infrastructure uses Active Directory as the attribute store. All servers run

Windows Server 2012 R2.

You plan to deploy a Web Application Proxy to a server named Server2 in the perimeter network.

You need to identify which value must be included in the certificate that is deployed to Server2.

What should you identify?

- A. The public IP address of Server2
- B. The FQDN of the AD FS server
- C. The name of the Federation Service
- D. The name of the Active Directory domain

Correct Answer: C
