### QUESTION 1

Your network contains one active directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2012 R2. You perform daily backups of the data on Server1 to Microsoft azure.

You need to restore the data from the 1st backup of Server1 to Server2.

What should you do first?

- A. On Server2, install the azure backup agent.
- B. In the domain, add server1 to the backup operators group.
- C. From the azure management portal, modify the configuration of the backup vault.
- D. On Server2, install the windows server backup feature.

Correct Answer: A

---

### QUESTION 2

Your network contains an Active Directory domain named contoso.com. All domain controllers run Windows Server 2012 R2.

In a remote site, a support technician installs a server named DC10 that runs Windows Server 2012 R2. DC10 is currently a member of a workgroup.

You plan to promote DC10 to a read-only domain controller (RODC).

You need to ensure that a user named Contoso\User1 can promote DC10 to a RODC in the contoso.com domain.

The solution must minimize the number of permissions assigned to User1.

What should you do?

- A. From Active Directory Administrative Center, pre-create an RODC computer account.
- B. From Dismgmt, run the local roles command.
- C. Join DC10 to the domain. Modify the properties of the DC10 computer account.
- D. Join DC10 to the domain. Run dsmod and specify the /server switch.

Correct Answer: A

A staged read only domain controller (RODC) installation works in two discrete phases:

1.

Staging an unoccupied computer account

2.

Attaching an RODC to that account during promotion

### QUESTION 3

#### HOTSPOT

Your network contains one Active Directory forest. The forest has three sites configured as shown in the following table.

Site name	Subnet
Default-First-Site-Name	192.168.5.0/24
Site1	192.168.1.0/24
Site2	192.168.2.0/24

The forest contains the site links configured as shown in the following table.

Site link	Sites in site link
Default-Site1	Default-First-Site-Name Site1
Site1-Site2	Site1 Site2
DEFAULTIPSITELINK	Default-First-Site-Name Site1 Site2

A domain controller named DC2 has an IP address of 192.168.2.2. DC2 and is in Site2. You run the following cmdlets.

```
New-ADReplicationSite Site3New-ADReplacationSubnet -Name "192.168.3.0/24" -SiteSite3
```

Use the drop-down menus to select the answer choice that completes each statement.

Hot Area:

### Answer Area

Site3 is [answer choice] site link.

	▼
in the Default-Site1	
in the DEFAULTIPSITELINK	
in the Site1-Site2	
not in any	

If you configure DC2 with IP address 192.168.1.2, and then physically move DC2 to Site3, the server object in Directory will [answer choice].

	▼
remain in Site2	
move to Site1	
move to Site3	
move to Default-First-Site-Name	

Correct Answer:

### Answer Area

Site3 is [answer choice] site link.

	▼
in the Default-Site1	
in the DEFAULTIPSITELINK	
in the Site1-Site2	
not in any	

If you configure DC2 with IP address 192.168.1.2, and then physically move DC2 to Site3, the server object in Directory will [answer choice].

	▼
remain in Site2	
move to Site1	
move to Site3	
move to Default-First-Site-Name

### QUESTION 4

Note: This question is part of series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

Your network contains one Active Directory forest named contoso.com. The forest contains two child domains and six domain controllers. The domain controllers are configured as shown in the following table.

Name	Domain	Site
DC1	Contoso.com	Main office
DC2	Contoso.com	Main office
DC3	Contoso.com	Europe office
DC4	Contoso.com	Asia office
DC5	Sales.contoso.com	Main office
DC6	Manufacturing.contoso.com	Main office

You have a trust from contoso.com to another forest named fabrikam.com. You plan to migrate users from contoso.com to fabrikam.com. You need to ensure that the users who migrated to fabrikam.com can continue to access shared resources in contoso.com. The solution must not require administrators to modify permissions to shared resources.

What should you use?

- A. Set-ADSite
- B. Set-ADReplicationSite
- C. Set-ADDomain
- D. Set-ADReplicationSiteLink
- E. Set-ADGroup
- F. Set-ADForest
- G. Netdom

Correct Answer: G

The Netdom move command moves a workstation or member server to a new domain. The act of moving a computer to a new domain creates an account for the computer on the domain, if it does not already exist.

### QUESTION 5

Your role of Network Administrator at ABC.com includes the management of the Active Directory Domain Services (AD DS) domain named ABC.com. The network includes servers that run Windows Server 2012. All client computers run Windows 7 Professional. A server named ABC-CA1 runs Certificate Services and is configured as an Enterprise Certification Authority (CA) for the ABC.com domain. Company security policy states that users should be able to encrypt their files and emails. You want to configure auto-enrollment for certificates that can be used for e-mail encryption and signing, Encrypting File System (EFS), and client authentication. You plan to configure a domain-wide group policy object (GPO) to enable the auto-enrollment.

What should you do first?

- A. You should duplicate the User certificate template and then publish the duplicated template.
- B. You should duplicate the Code Signing certificate template and then publish the duplicated template.

C. You should duplicate the Basic EFS certificate template and then publish the duplicated template.

D. You should duplicate the Computer certificate template and then publish the duplicated template.

Correct Answer: A
