QUESTION 1

You are designing a SharePoint 2010 intranet site for a corporation. Your design must meet the following requirements:

.The homepage must contain a single Web Part that displays a view of a specific document library.

.Each employee must be able to create a persistent view of the list that would be filtered, grouped, and sorted based on their selection criteria.

Which approach should you recommend?

A. Create a new page for each employee and add the document library Web Part to the page. Instruct each employee to customize an individual view of the Web Part. Then select the Make Homepage button in the Page tab on the ribbon.

B. Create the site homepage. Deploy a copy of SharePoint Designer to each employee's computer. Instruct each employee to use SharePoint Designer to customize the site homepage, including the view of the document library.

C. Create the site homepage. Add the document library Web Part to the page, with the Allow Editing in Personal View option selected. Instruct each employee to personalize the page in the browser and to customize an individual view of the Web Part.

D. Create the site homepage. Instruct each employee to edit the homepage in the browser, adding a copy of the document library Web Part to the page. Instruct each employee to customize an individual view of the document library in the new Web Part.

Correct Answer: C

QUESTION 2

You are designing the modification of an existing SharePoint 2010 intranet site for a school. The registrar at the school needs each department to be able to add a new page to their departmental site. The page must be preconfigured with a Web Part showing the latest announcement list items from the registrar's site regarding class enrollment for the upcoming semester. You need to design a page template that can be used by multiple departments.

Which approach should you recommend?

A. Create a custom master page that includes a Web Part zone. Add a Web Part containing the registrar's announcements to the Web Part zone. Apply the master page to the intranet site.

B. Create a publishing page in the registrar's site that includes a Web Part zone. Add a Web Part containing the registrar's announcements to the Web Part zone.

C. Create a page layout that includes a Web Part zone. Add a Web Part containing the registrar's announcements to the Web Part zone.

D. Create an application page with a Web Part Zone. Add a Web Part containing the registrar's announcements to the Web Part Zone. Deploy the application page to the _layouts directory.

Correct Answer: C

QUESTION 3

You need to specify the correct artifacts to use in a SharePoint 2010 application for a school district. The school district's administrator needs to be able to search for student information on an intranet SharePoint 2010 portal. Student

information is currently available in another database, which supports an Open Database Connectivity (ODBC) driver. You need to design the solution to meet the following requirements:

- .Provide a user interface to search for a student based on name.
- .Enable the administrator to select the correct student name from the search results.
- .Provide a student header section that displays the primary student identity information, which will enable the administrator to correlate any new information with the correct student.
- .Provide additional data entry pages to add or update additional student information.

Which approach should you recommend?

- A. Design HTML Web pages to render the student details. Install these pages under the /templates/_layouts/1033 folder and load these pages in Web Parts.
- B. Design connected Web Parts to share information among search data entry, student header information, and new data entry information Web Parts.
- C. Design a user control and load this control in a Web Part to search for a student. Then render the student details in a SharePoint page.
- D. Design a Web Part to search for a student. Then render the student record details in a SharePoint page.

Correct Answer: B

QUESTION 4

You are designing a SharePoint 2010 application. You need to specify that a custom button is defined and added to the SharePoint 2010 ribbon. Which two actions should be performed? (Each correct answer presents part of the solution. Choose two.)

- A. Create a new Content Organizer content type that defines the button.
- B. Create Feature Definition and Feature Element XML files that define the button.
- C. Use the STSADM.EXE utility to deploy the button.
- D. Use the Site Collection Features option in the Site Collection Administration group to deploy the button.

Correct Answer: BC

QUESTION 5

Your SharePoint 2010 team does not have enough development team members, time, or budget to support the requests from all of the different departments in the organization.

You have the following requirements:

- .Your internal IT security team requires that the SharePoint 2010 architects include the proper design specifications necessary to limit the security vulnerabilities in the applications they develop.
- .Mid-level Microsoft ASP.NET developers across the organization must be able to implement SharePoint 2010 solutions that meet the security specifications with no extra training.
- .You must use specific tools and procedures to ensure that possible security vulnerabilities are limited.

You need to create a SharePoint 2010 design specification that directs the developers in the proper method of creating applications to minimize security issues.

Which approach should you recommend?

- A. Specify that developers should implement sandboxed solutions.
- B. Specify that developers should implement the applications with code access security (CAS).
- C. Guide developers to implement sandboxed and farm solutions.
- D. Guide developers to implement and deploy custom solutions at the farm level.

Correct Answer: A
