QUESTION 1

Which type of application has the following characteristics when it is installed?

Runs continuously in the background by default when the startup type is set to automatic

Presents no user interface

A.

Console-based

B.

Windows Forms

C.

Windows Service

D.

Batch file

Correct Answer: C

A Windows service runs in the background and has no interface.

QUESTION 2

An application presents the user with a graphical interface. The interface includes buttons that the user clicks to perform tasks. Each time the user clicks a button, a method is called that corresponds to that button. Which term is used to describe this programming model?

A. Event driven
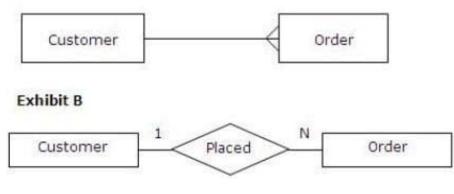

B. Structured

C. Service oriented

D. Functional

Correct Answer: A

QUESTION 3

You are reviewing a design for a database. A portion of this design is shown in the exhibits. Note that you may choose either the Crow\\'s Foot Notation or Chen Notation version of the design. (To view the Crow\\'s Foot Notation, click the Exhibit A button. To view the Chen Notation, click the Exhibit B button.)

Exhibit A

Exhibit B

Which term is used to describe the Customer component?

A. Field

B. Attribute

C. Property

D. Entity

Correct Answer: D

Customer is a table (entity).

QUESTION 4

You are designing a class for an application. You need to restrict the availability of the member variable accessCount to the base class and to any classes that are derived from the base class. Which access modifier should you use?

A. Protected

B. Private

C. Public

D. Friend

Correct Answer: B

QUESTION 5

Which type of Windows application presents a parent window that contains child windows?

A. Application programming interface (API)

B. Single-document interface (SDI)

C. Multiple-document interface (MDI)

D. Command-line interface (CLI)

Correct Answer: C

A multiple document interface (MDI) is a graphical user interface in which multiple windows reside under a single parent window. Such systems often allow child windows to embed other windows inside them as well, creating complex nested hierarchies. This contrasts with single document interfaces (SDI) where all windows are independent of each other.
