QUESTION 1

IBM BPM offers which read-only system variable to access the information stored about an exception that occurred in an instance of a service?

- A. tw.object.Error
- B. tw.system.error
- C. tw.object.XMLElement
- D. tw.system.step.error

Correct Answer: D

QUESTION 2

A shared object is passed by reference from a process to two different services. The process and services each contain a separate copy of the business object. When the first service completes, the shared object values are automatically persisted to the data store.

Which statement is true regarding the second service?

- A. When the second service starts, the shared object values are automatically loaded from the data store.
- B. When the second service starts, the shared object values still refers to the copy of the business object it received from the process.
- C. When the second service starts, the shared object values have to be manually loaded from the data store.
- D. When the second service starts, the shared object values is passed by the process again.

Correct Answer: D

QUESTION 3

Which statement is true regarding IBM BPM capabilities to support structured and dynamic processes?

- A. It only supports dynamic processes using ad-hoc activities. Structured process models are not supported.
- B. It only supports structured process models with a defined sequence of activities following the BPMN 2.0 notation.
- C. Process applications must include one structured process model, but additional ad-hoc activities can be added if desired.
- D. It supports structured process models using the BPMN 2.0 notation as well as unstructured processes using ad-hoc activities.

Correct Answer: B

QUESTION 4
