- A. Performance
- B. Restart
- C. Recovery
- D. Availability
- E. Scalability

Correct Answer: DE

QUESTION 3

IBM Analytics Engine is based on what open source package?

- A. Hortonworks Data Science
- B. Hortonworks Data Platform
- C. Hortonworks Predictive Analytics
- D. Hortonworks for Global Data Management

Correct Answer: B

QUESTION 4

Which are two limitations of the CouchBackup tool?

- A. The database cannot be accessed while the tool is running
- B. Index definitions are backed up by the tool but the content of indexes is not
- C. it does not offer a way to restore backups
- D. It's not possible to embed tool commands into UNIX shell scripts
- E. Attachments are not backed up by the tool

Correct Answer: BE

<https://cloud.ibm.com/docs/services/Cloudant?topic=cloudant-ibm-cloudant-backup-and-recovery>

The CouchBackup tools have the following limitations:

security settings are not backed up by the tools.

Attachments are not backed up by the tools.

Backups are not precisely accurate "point-in-time" snapshots.

The reason is that the documents in the database are retrieved in batches, but other applications might be updating documents at the same time. Therefore, the data in the database can change between the times when the first and last batches are read. Index definitions that are held in design documents are backed up, but the content of indexes is not backed up.

This limitation means that when data is restored, the indexes must be rebuilt.

The rebuilding might take a considerable amount of time, depending on how much data is restored.

QUESTION 5

What is the function of the Push Notifications service?

- A. Send notifications to mobile devices and browsers
- B. Pushes fixes to applications as required
- C. Sends notifications to the network team as required
- D. Pushes notifications to the administration team as required

Correct Answer: D
