100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by IBM Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Which is a poor choice for a clustering dimension of a multidimensional clustering (MDC) table?

- A. Columns with low cardinalities
- B. Columns with high cardinalities
- C. Columns involved in roll-in or roll-out of data
- D. Columns involved in equality or range predicate queries

Correct Answer: B

---

**QUESTION 2**

What statement regarding Asynchronous index cleanup (AIC) is correct?

- A. AIC removes all invalid index entries that refer to the attached partitions.
- B. AIC is initiated if a range-partitioned table contains one or more nonpartitioned indexes.
- C. AIC activates a newly attached partition after the index entries have been synchronized.
- D. AIC will not be initiated if a range-partitioned table has dependent materialized query tables (MQTs).

Correct Answer: B

---

**QUESTION 3**

For a multi-partitioned database, what is the default behavior of the BACKUP DATABASE command?

- A. It will backup just the catalog partition.
- B. It will backup all partitions simultaneously.
- C. It will backup just the partition that the command is executed from.
- D. It will backup just the partitions that reside on the host that the command is executed from.

Correct Answer: C

---

**QUESTION 4**

What statement regarding Asynchronous index cleanup (AIC) is correct?

- A. AIC removes all invalid index entries that refer to the attached partitions.
- B. AIC is initiated if a range-partitioned table contains one or more nonpartitioned indexes.

- C. AIC activates a newly attached partition after the index entries have been synchronized.
- D. AIC will not be initiated if a range-partitioned table has dependent materialized query tables (MQTs).

Correct Answer: B

---

## QUESTION 5

What must be done to convert a populated base table to a multidimensional clustering (MDC) table?

- A. Export the data, create an MDC table, and then import or load the data into the MDC table.
- B. Execute the ALTER TABLE ... ORGANIZE BY DIMENSIONS statement to convert the table.
- C. Create an MDC table and then move the data in the base table to the MDC table with the db2move command.
- D. Export the data, execute the ALTER TABLE ... ORGANIZE BY DIMENSIONS statement to convert the table, and then import or load the data into the converted table.

Correct Answer: A
