QUESTION 1

Which time elements are part of a routing operation? (Choose 3)

- A. Pick/pack time
- B. Float before production
- C. Queue time
- D. Wait time
- E. Move time

Correct Answer: ACD

QUESTION 2

Your project used process orders for the production of liquid chemicals.

What can you define to ensure that the production flow happens only in physically connected tanks?

- A. Operation network
- B. Work center hierarchy
- C. Setup matrix
- D. Resource network

Correct Answer: B

QUESTION 3

How would you define pegging in the context of Advanced Planning?

- A. An evaluation that is ordered according to the network structure of all related products and represents the coverage of issue elements
- B. An evaluation that is ordered according to the bill-of-material structure of all related products and represents the relationship between the receipt and the issue elements
- C. An evaluation to verify if there are overstock situations in the balance between receipt and issue elements after the production planning run
- D. An evaluation to verify if there are material or capacity shortages in the network after the production planning run.

Correct Answer: B

QUESTION 4

What does a line hierarchy in repetitive manufacturing represent?

- A. A production line with a parallel sequence in the routing
- B. A production line with prioritized alternative work centers
- C. A production line with more than one work center
- D. A production line with an alternative sequence in the routing

Correct Answer: C

QUESTION 5

Your company produces a finished good based on a forecast and expects it to be in stock when customers order it. If customers order more than the forecasted quantity, the production quantity should be increased to try to meet the extra demand.

Which planning strategy do you use?

- A. Planning with final assembly (40)
- B. Make-to-order production (20)
- C. Make-to-stock production (10)
- D. Planning without final assembly (50)

Correct Answer: A
