## QUESTION 1

In which state should elicitation results be in order to begin modelling of requirements?

- A. Unconfirmed
- B. Any
- C. Confirmed
- D. Documented

Correct Answer: B

Elicitation Results (any state): modelling can begin with any elicitation result and may lead to the need for more elicitation to clarify or expand upon requirements. Elicitation and modelling may occur sequentially, iteratively, or concurrently.

---

- A. Elicitation analysis
- B. Conduct elicitation
- C. Stakeholder collaboration
- D. Prepare for elicitation

Correct Answer: D

## QUESTION 4

Which of the following is a characteristic of predictive planning approach?

- A. Activities are divided into iterations
- B. Requirements are gathered through team interaction and feedback
- C. Tasks are performed recurrently
- D. Information is captured in standardized templates

Correct Answer: D

Business analysis information may be captured in a formal document or set of representations following standardized templates.

---

## QUESTION 5

Requirements allocation is an element of which task?

- A. Specify and model requirements
- B. Verify requirements
- C. Define requirements architecture
- D. Define design options

Correct Answer: D

The purpose of Define Design Options is to define the solution approach, identify opportunities to improve the business, allocate requirements across solution components, and represent design options that achieve the desired future state. Requirements allocation is the process of assigning requirements to solution components and releases to best achieve the objectives.
