QUESTION 1

You work as an ADO.NET Application Developer for ABC Inc. The company uses Microsoft Visual Studio .NET 2008 as its application development platform. You create an ADO.NET application by using .NET Framework 3.5. You are using the System.Linq.Expressions namespace. You need to specify an expression that applies a delegate or lambda expression to a list of argument expressions. Which of the following classes will you use to accomplish the task?

A. ListInitExpression

B. InvocationExpression

C. MemberAssignment

D. NewArrayExpression

Correct Answer: B

QUESTION 2

You work as a Software Developer for ABC Inc. The company has several branches worldwide. The company uses Visual Studio.NET 2005 as its application development platform. You are creating an application using .NET Framework 2.0. The application will be used by all the branches of the company. You sometimes require a variable number of arguments to be passed to a method. For example, you may require a sum method, which calculates the total of the numbers passed to it no matter how many numbers are passed. What will you do to accomplish the task?

A. Use the out keyword.

B. Use the base keyword.

C. Use the volatile keyword.

D. Use the params keyword.

E. Use the ref keyword.

Correct Answer: D

QUESTION 3

Mark works as a Software Developer for ABC Inc. He is participating in designing a .NET remoting component for an application that will be hosted on a load-balanced farm. For this, he creates a .NET remote object using Visual Studio .NET 2005. The .NET remote object is used to modify properties of a class. The class contains twenty properties. The .NET remote object is frequently used by client applications. He wants to minimize the network traffic. Which of the following actions will he take to accomplish the task?

Each correct answer represents a complete solution. Choose all that apply.

A. Use the Marshal-by-value objects.

B. Use the SerializableAttribute attribute.

C. Use the MarshalByRefObject class.

D. Use the IDisposable interface.

Correct Answer: AB

QUESTION 4

You work as a Software Developer for ABC Inc. You develop a multi-threaded application named MyMultThreadApp using Visual Studio .NET. The application logs all warning and informational messages in an event log that keeps track of significant events when the application is running. The event log records information that might be useful for troubleshooting or performance analysis. Which of the following are the considerations that you must keep in mind when logging events with multithreaded components?

Each correct answer represents a complete solution. Choose three.

A. An exclusive lock should be obtained on the log to avoid race conditions.

B. Each shared component should be thread-safe when interacting with an event log.

C. The System.Threading namespace should be used to record the identity of each thread for logging messages.

D. The Debug and Trace classes should be used to log events.

Correct Answer: ABC

QUESTION 5

Mark works as a Software Developer for CyberNet Inc. He develops a serviced component, named MyComponent1, using Visual Studio .NET. MyComponent1 uses a SQL Server database. In the code, Mark uses the ExecuteNonQuery method of the SqlCommand class to execute a Transact- SQL statement. Which of the following values will the ExecuteNonQuery method return?

A. A string type value

B. A boolean type value

C. An integer type value

D. A double type value

Correct Answer: C
