QUESTION 1

Which of the following processing methods are TRUE, to solve the packet congestion on the tunnel? (Multiple Choice)

A. The HAC at the tunnel ingress discards unknown unicast packets.

B. The HAC discards broadcast or multicast ARP, ND, DHCP, and mDNS packets to prevent loops.

C. After broadcast/multicast packets are transparently transmitted to the FAC, the FAC converts the packets to unicast packets and forwards the packets over a specific tunnel based on the home AP connected to it.

D. The FAP discards unknown unicast packets and forwards other packets to roaming STAs.

Correct Answer: AC

QUESTION 2

The Agile Controller must sub-group the devices to facilitate the delivery of rules.

A. Correct

B. False

Correct Answer: B

QUESTION 3

Which of the following factors will affect the calculation of the radius of the Fresnel zone in outdoor communication?

A. Antenna beamwidth

B. RF visual line of sight

C. Distance between transceiver antennas

D. Signal transmission frequency

Correct Answer: CD

QUESTION 4

The WLAN Internet service is provided in public places such as banks and airports, and the user accesses the network after searching for the SSID. However, if there is a private AP and an SSID with the same or similar SSID is set, when the user searches for the SSID, the user may be mistakenly connected to the private AP, which may pose a security risk. What features can I use to solve this problem?

A. WIDS device counter function

B. WIDS attack detection + WIDS blacklist function

C. WIDS attack detection + WIDS equipment counter

D. Configure SSID counterfeit identification rules + WIDS device counter

Correct Answer: D

QUESTION 5

The following is a description of the wrong description of the chain network in the Mesh network?

A. In a chained network environment, users can pre-designate neighbors connected to them.

B. In a chained network environment, users cannot pre-assign neighbors connected to them.

C. The link formed between the MPs can convert the 802.3 message into an 802.11s message and then transmit it on the wireless link.

D. In a chained network environment, there may be a single point of failure.

Correct Answer: B
