-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

A customer is planning to deploy Hitachi Object Replication on their existing Hitachi NAS Platform 4000.

They want to replicate only two of their WFS-1 file systems.

Which statement is correct?

- A. Object replication must be setup using the GUI.
- B. Object replication is supported at the block level only.
- C. Object replication is not supported for this type of file system.
- D. Object replication is supported on the storage pool level only.

Correct Answer: C

---

**QUESTION 2**

What should you consider about concurrent CIFS connections when designing a Hitachi NAS Platform two-node cluster solution?

- A. The concurrent CIFS connection limits per node are added together and are supported on both nodes.
- B. The concurrent CIFS connection limits on each node are divided in half when clustered.
- C. The limits are per node and the surviving node can only support 1/2 the number that the cluster supports.
- D. The surviving node in a cluster can support twice the single node's connection limit.

Correct Answer: C

---

**QUESTION 3**

A customer recently purchased a Hitachi NAS Platform 4000 and a Hitachi HUS 130 for back-end storage.

They are concerned about back-end performance.

What are two best practices? (Choose two.)

- A. Do not share storage ports with another other host.
- B. Do not mix SAS 10K and SAS 7.2K in the same untiered storage pool.
- C. Do not exceed 8 SAS 7.2K LUNS per FC port.

D. Do not use FC Loop mode.

Correct Answer: AB

---

#### QUESTION 4

You are designing Hitachi NAS File Clone solution for a customer with an existing Hitachi NAS platform. Which two are required? (Choose two.)

- A. NAS firmware version 8.x or later
- B. iSCSI volumes
- C. WFS-2 file system
- D. Hitachi NAS G2 hardware

Correct Answer: AC

---

#### QUESTION 5

An enterprise customer has asked you to plan a data migration from their six existing Windows Storage Server clusters to their Hitachi NAS platform 4000 cluster. They are currently using DFS and all of the current user access is mapped to the DFS namespace. You are asked to deliver a transparent migration strategy to minimize user impact. Which optimal migration strategy do you recommend?

- A. Create an EVS for each server instance and assume the original name and IP address.
- B. Consolidate the environment to two EVS, migrate the shares and link them to the same DFS context.
- C. Use Cluster Name Space and build a namespace that mirrors the current DFS namespace.
- D. Use CNAME records to point end-users to EVS instances using the same UNC path.

Correct Answer: B
