QUESTION 1

A Hitachi NAS Platform customer has NFS clients accessing files on a UNIX security mode virtual volume. What security information is before granting or denying access? (Choose three.)

- A. UID
- B. atime
- C. GID
- D. file permission
- E. SID

Correct Answer: ACD

QUESTION 2

A customer has purchased a Hitachi NAS Platform solution and wants to consolidate databases from 25 SQL servers and 15 Oracle servers onto the Hitachi NAS Platform. I/O size is expected to be relatively large.

Which two should be used to achieve optimal performance? (Choose two.)

- A. 4 KB block size file system
- B. 32 KB block size file system
- C. WORM file system
- D. jumbo frames

Correct Answer: BD

QUESTION 3

The administrator of a Hitachi NAS Platform 4000 has to integrate their NAS into their backup system using NDMP.

What must be done on the Hitachi NAS Platform?

- A. Set NDMP version to 5.

- B. Define the file systems to be backed-up.
- C. Set the NDMP username and password,
- D. Run the ndmp-enhanced-stats CLI command.

Correct Answer: C

QUESTION 4

A customer with a Hitachi NAS Platform 3200 (source) would like to relocate all the data to a new Hitachi NAS Platform 4000 (destination) using Incremental File Replication with Transfer Primary Access (TPA). Which two are required before the data migration can take place? (Choose two.)

- A. The source and destination firmware levels of the HNAS systems must be compatible for replication.
- B. The external SMU must manage the source and destination nodes.
- C. The source and destination nodes must be connected to different storage systems.
- D. The clients of the source and destination nodes must have write access to the snapshots before and after the replication.

Correct Answer: AB

QUESTION 5

You are planning a server consolidation for a customer as part of a Hitachi NAS Platform 4000 proposal. The customer desires to retain their existing CIFS server names during the migration as they have applications directly referencing these systems. Which method should be used to accommodate this requirement?

- A. Use Cluster Name Service (CHS) to virtualize the namespace.
- B. Add a static route to each server.
- C. Implement Distributed File System (DFS) to virtualize the namespace.
- D. Implement a separate EVS for each legacy file server.

Correct Answer: D
