QUESTION 1

You have been asked to install HiCommand Protection Manager (HPtM) software in an environment where integration with backup software is required. Which three must be in place before you begin the installation? (Choose three.)

A. RAID Manager CCI

B. Netbackup MS SQL server agent

C. Netbackup or Backup Exec software

D. HiCommand Device Manager software

E. ShadowImage software or Copy-on-Write Snapshot software

Correct Answer: ACE

QUESTION 2

A customer is using ShadowImage to replicate an online database on a UNIX server. The ShadowImage pairs are suspended and the secondary volumes are presented to a recovery server. What are two steps that must be performed prior to starting the database on the recovery server? (Choose two.)

A. Import the volume/disk group.

B. Perform a fsck on each file system.

C. Roll the replicated database logs forward.

D. Change the IP address of the recovery server.

Correct Answer: AB

QUESTION 3

A customer is replicating data between sites using Universal Replicator. The Universal Replicator Command Control Interface (CCI) device group name is UR_db01. A power outage occurred at the production site and the users have moved to the recovery site. The production disk array, CCI server, and network equipment are still running on generator power. Which command should the customer issue from the recovery CCI server to suspend the Universal Replicator pairs and reverse the replication direction?

A. horctakeover -g UR_db01 -S

B. pairsplit -g UR_db01 -swapp

C. pairsplit -g UR_db01 -swaps

D. horctakeover -g UR_db01 -swapp

Correct Answer: A

QUESTION 4

If a CCI instance fails to start, which two log files may contain messages related to the problem? (Choose two.)

A. horcm.log

B. horcm_PID.trc

C. horcm_HOST.log

D. horcc_HOST.log

Correct Answer: CD

QUESTION 5

A customer uses Universal Replicator for Disaster Recovery for several mission critical applications. A disaster occurs at the production site and network communication is lost between the sites. Which two actions should be used to split the Universal Replicator pairs from the recovery site so the secondary volumes can be used for application recovery? (Choose two.)

A. Issue a horctakeover -S command from the recovery site CCI server.

B. Issue a horctakeover -S command from the recovery site Storage Navigator.

C. Suspend the Universal Replicator pairs with S-VOL write enabled from the recovery site CCI Server.

D. Delete the Universal Replicator pairs from the secondary site using the recovery site Storage Navigator.

Correct Answer: AD
