QUESTION 1

2 DataCenters, FC network was grown -> more than 200 ports per Fabric, FC Switches 8-40 ports, Each in dual redundant layout.

The Goals are:

- A. Customer should consolidate to latest technology
- B. FC Connection between DC needs to be encrypted, scale beyond 300 ports, with least Management

- A. HP SN 9500C Director
- B. HP DC SAN Director
- C. HP SN8000C Director
- D. HP SN8000B SAN Director

Correct Answer: C

QUESTION 2

Refer to the scenario.

A large publicly-traded motion picture exhibitor that is a leader in digital and 3D cinema deployments operates 233 theaters and more than 2,200 screens in small to mid-sized communities in 35 states around the United States. They rely on

MS Exchange Server 2010 for email. MS SQL Server 2010 for analyzing data about movies and theater-goers, and MS Excel 2010 for crunching numbers.

The company runs nightly incremental backups and a full weekly backup that consists of close to 7 TB of data which takes up 72 hours to complete. The quarterly backups add an additional 7 TB of data. Tapes are inventoried and transported

from the main data center to the disaster recovery site 150 miles away. The process of transporting tape cartridges to and from the Disaster Recovery site requires hours of daily work.

The company currently relies on an aging robotic tape library and a process that takes the nightly backup tapes offsite every morning. Additionally, the company keeps an inventory, and if a restore is necessary they have to retrieve the tapes

from the DR site and transport them to the main data center site They have a 7 year data retention plan, and the tapes are expensive and not always reliable. Given the company's current system, if a full weekly backup fails over a weekend,

the re-run could take up to 10 hours, even if just one job failed.

The company has deployed a virtualized server infrastructure which runs VMware vSphere 5 on HP BladeSystem c7000 enclosures and BL460c servers interconnected with HP Virtual Connect Flex-10 10Gb Ethernet Modules as well as

several HP ProLiant DL380 servers. The company's top four IT improvements goals are as follows:

- replacing the aging robotic tape library
- enabling replication of backed up data from the main data center to the disaster recovery site (150 miles)
- retaining more backup data in smaller disk space
- increasing efficiency reliability, and ease of system administration Moreover the company's top three business benefit goals are as follows:
 - increased confidence in disaster recovery
 - minimal disruption by backups during regular business hours
 - improved management of external audits

The company has asked that you create multiple solution proposals and prioritize one when you return for a presentation.

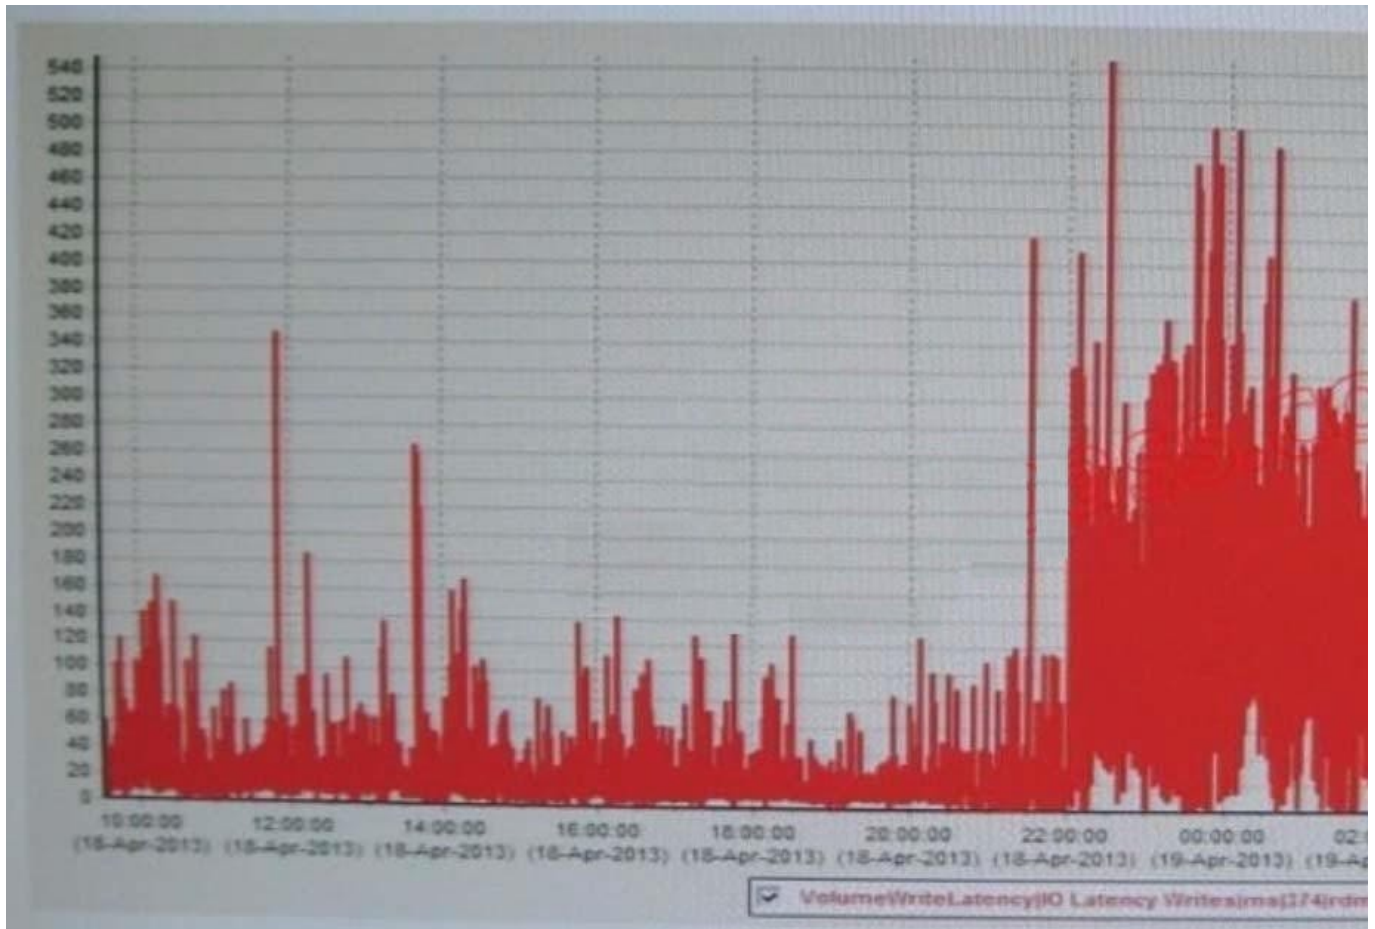

Which additional information do you require to validate the customer DR strategy? (Select two.)

- A. WAN latency
- B. Data structure
- C. Data change rate
- D. Number of hosts
- E. Distance between data centers

Correct Answer: AC

QUESTION 3

Refer to the exhibit.

A customer reports poor application performance on their OLTP database, which is on an existing two-node HP P4500 Virtualization provides you with the chart in the exhibit. Which conclusion can you draw from this graph?

- A. Maximum acceptable response time is reached during business hours.
- B. Maximum acceptable response time is reached during backup.
- C. Optimal response time is not reached during the whole measure period.
- D. Optimal response time is reached during business hours.

Correct Answer: C

QUESTION 4

A customer is building a new data center. They want to implement a free cooling strategy in order to reduce their Computer Room Air Handling (CRAH) costs, while increasing their rack density.

Which free cooling methods meet the customer requirements? (Select two.)

- A. Water-side economization
- B. Air-side economization
- C. Cold-aisle containment

D. Closed-loop containment

E. Hot-aisle containment

Correct Answer: AB

p4, topic "free

<http://h20000.www2.hp.com/bc/docs/support/SupportManual/c02507744/c02507744.pdf> cooling strategies"

QUESTION 5

A large publicity-traded motion picture exhibitor that is a leader in digital and 3D cinema deployments operates 233 theaters and more than 2,200 screens in small to mid-sized communities in 35 states around United States. They rely on MS Exchange Server 2010 for email, MS SQL Server 2010 for analyzing data about movies and theater-goers, and MS Excel 2010 for crunching numbers.

The company runs nightly incremental backups and a full weekly backup that consists of close to 7TB of data which takes up 72 hours to complete. The quarterly backups add an additional 7 TB of data. Tapes are inventoried and transported from the main data center to the disaster recovery site 150 miles away. The process of transporting tape cartridges to and from the Disaster Recovery site requires hours of daily work.

The company currently relies on an aging robotic tape library and a process that takes the nightly backup tapes of site every morning. Additionally, the company keeps an inventory, and if a restore is necessary, they have to retrieve the tapes from the DR site and transport them to the main data center site. They have a 7 year data retention plan, and the tapes are expensive and not always reliable. Given the company's current system, if a full weekly backup fails over a weekend, the re-run could take up to 10 hours, even if just one job failed.

The company has deployed a virtualized server infrastructure which runs VMware vSphere 5 on HP BladeSystem c7000 enclosures and BL460c servers interconnected with HP virtual Connect Flex-10 10Gb Ethernet modules as well as several HP ProLiant DL380 servers.

The company top four IT improvements goal are as follows:

- replacing the aging robotic tape library
- enabling replication of backed up data from the main data center to the disaster recovery site (150 miles)
- retaining more backup data in smaller disk space
- increasing efficiency, reliability and ease of System administration.

Moreover the company's top three business benefit goals are as follows:

- increased confidence in disaster recovery
- Minimal disruption by backup during regular business hours
- improved management of external audits.

Refer to the scenario. Which additional information do you require to validate the customer DR strategy? (Select three.)

A. WAN latency

B. Data structure

C. Number of hosts

D. RTO and RPO

E. Data change rate

F. Distance between data centers

Correct Answer: ADE
