QUESTION 1

Refer to the exhibit.

An organization provides WiFi access through a corporate SSID with an Aruba Mobility Master (MM) - Mobility Controller (MC) network that includes PEF functions. The organization wants to have a single firewall policy configured and applied

to the employee role.

This policy must allow users to reach Web, FTP, and DNS services, as shown in the exhibit. Other services should be exclusive to other roles. The client NICs should receive IP settings dynamically.

Which policy design meets the organization's requirements while minimizing the number of policy rules?

- A.
- ```
netdestination alias1
 host 10.200.0.5
 host 10.200.0.10
 host 10.200.0.20

netdestination alias2
 host 10.200.0.10
 host 10.200.0.20

ip access-list session policy1
 user host 10.200.0.5 svc-dns permit
 user alias alias1 svc-http permit
 user alias alias2 svc-ftp permit
```
- B.
- ```
netdestination alias1
  host 10.200.0.10
  host 10.200.0.20

ip access-list session policy1
  any any svc-dhcp permit
  user host 10.200.0.5 svc-dns permit
  user host 10.200.0.5 svc-http permit
  user alias alias1 svc-http permit
  user alias alias1 svc-ftp permit
```
- C.
- ```
netdestination alias1
 host 10.200.0.5
 host 10.200.0.10
 host 10.200.0.20

netdestination alias2
 host 10.200.0.10
 host 10.200.0.20

ip access-list session policy1
 any any svc-dhcp permit
 user host 10.200.0.5 svc-dns permit
 user alias alias1 svc-http permit
 user alias alias2 svc-ftp permit
```
- D.
- ```
netdestination alias1
  host 10.200.0.10
  host 10.200.0.20

ip access-list session policy1
  user host 10.200.0.5 svc-dns permit
  user host 10.200.0.5 svc-http permit
  user alias alias1 svc-http permit
  user alias alias1 svc-ftp permit
```

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: C

QUESTION 2

A network administrator has deployed an Airwave Management Platform (AMP) server and integrated it with a Mobility Master (MM) ?Mobility Controller (MC) based WLAN. The AMP server already has all Aruba Mobility devices including Access Points (APs) in the "UP" devices list.

What are two actions the administrator can execute upon the APs under "Airwave>Devices>Monitor"? (Choose two.)

A. Open the WebUI of the MC where the AP terminates.

B. Re-provision the Access Point.

C. Disable and change the mode of the AP's radios.

D. Invoke MC's show commands for that Access Point.

E. Run Spectrum Analysis locally.

Correct Answer: DE

QUESTION 3

Refer to the exhibits.

A user reports slow response time to a network administrator and suggests that there might be a problem with the WLAN. The user's phone supports 802.11ac in the 5 GHz band. The network administrator finds the user in the Mobility Master (MM) and reviews the output shown in the exhibit.

What can the network administrator conclude after analyzing the data?

- A. The low SNR forces the client to back off to low MCs, therefore speed is low and retransmits are high.
- B. Client health is poor, but SNR is fair. TX power must be increased in both the client and the AP.
- C. Since SNR is good, then the high retransmit rate must be due a hidden node scenario or high interference.
- D. High Successful frame count and high Max Speed is an indication of a healthy client. Connection will improve at any time.

Correct Answer: D

QUESTION 4

Refer to the exhibit.

```
(MC14-1) #show aaa authentication dot1x Corp-Network
```

```
802.1X Authentication Profile "Corp-Network"
```

```
-----  
Parameter                                     Value  
-----  
Max authentication failures                   0  
Enforce Machine Authentication               Enabled  
Machine Authentication: Default Machine Role  guest  
Machine Authentication Cache Timeout         24 hr(s)  
Blacklist on Machine Authentication Failure  Disabled  
Machine Authentication: Default User Role    guest  
Interval between Identity Requests          5 sec  
Quiet Period after Failed Authentication     30 sec  
Reauthentication Interval                   86400 sec  
Use Server provided Reauthentication Interval Disabled  
Use the termination-action attribute from the Server Disabled  
Multicast Key Rotation Time Interval        1800 sec  
Unicast Key Rotation Time Interval          900 sec  
Authentication Server Retry Interval        5 sec  
Authentication Server Retry Count           3  
Framed MTU                                  1100 bytes  
Max number of requests sent during an Auth attempt 5  
Max Number of Reauthentication Attempts      3  
Maximum number of times Held State can be bypassed 0  
Dynamic WEP Key Message Retry Count         1  
Dynamic WEP Key Size                        128 bits  
Interval between WPA/WPA2 Key Messages      1000 msec  
Delay between EAP-Success and WPA2 Unicast Key Exchange 0 msec  
Delay between WPA/WPA2 Unicast Key and Group Key Exchange 0 msec  
Time interval after which the PMKSA will be deleted 8 hr(s)  
Delete Keycache upon user deletion          Disabled  
WPA/WPA2 Key Messages Retry Count           3  
Multicast Key Rotation                      Disabled  
Unicast Key Rotation                        Disabled  
Reauthentication                            Disabled  
Opportunistic Key Caching                   Enabled
```

The network administrator must ensure that the configuration will force users to authenticate periodically every eight hours. Which configuration is required to effect this change?

- A. Set the reauth-period to 28800 enable reauthentication in the dot1x profile.
- B. Set the reauth-period to 28800 enable reauthentication in the AAA profile.
- C. Set the reauth-period to 28800 enable reauthentication in both dot1x and AAA profile.
- D. Set the reauth-period to 28800 in the dot1x profile and enable reauthentication in the AAA profile.

Correct Answer: A

A network administrator deploys User Based Tunneling (UBT) in a corporate network to unify the security policies enforcement. When users authenticate with 802.1X, ClearPass shows Accept results, and sends the Aruba-User-Role attribute as expected. However, the AOS-CX based switch does not seem to build the tunnel to the Mobility Controller (MC) for this user.

Why does the switch fail to run UBT for the user?

- A. The switch has not fully associated to the MC.
- B. ClearPass is sending the wrong Vendor ID.
- C. The switch is not configured with the gateway-role.
- D. ClearPass is sending the wrong VSA type.
- E. The switch is not configured with the port-access role.

Correct Answer: B
