QUESTION 1

Northern Trail Outfitters (NTO) has an integration set up between a Salesforce org and a quoting system. NTO would like to show a notification to all sales representatives that use Salesforce anytime the quoting system will be taken down for maintenance.

Which Salesforce API should an Integration Architect use to fulfill this requirement?

- A. Connect REST API
- B. Tooling API
- C. REST API
- D. Streaming API

Correct Answer: D

QUESTION 2

Universal Containers (UC) owns a variety of cloud-based applications, including Salesforce, alongside several on-premise applications. The on-premise applications are protected behind a corporate network with limited outside access to

external systems.

UC would like to expose data from the on-premise applications to Salesforce for a more unified user experience. The data should be accessible from Salesforce in real-time.

Which two actions should be recommended to fulfill this system requirement? Choose 2 answers

- A. Develop an application in Heroku that connects to the on-premise database via an ODBC string and VPC connection.
- B. Develop custom APIs on the company's network that are invocable by Salesforce.
- C. Deploy MuleSoft to the on-premise network and design externally facing APIs to expose the data.
- D. Run a batch job with an ETL tool from an on-premise server to move data to Salesforce.

Correct Answer: BC

QUESTION 3

Universal Containers (UC) is a global financial company. UC support agents would like to open bank accounts on the spot for a customer who is inquiring about UC products.

During opening the bank account process, the agents execute credit checks for the customers through external agencies. At a given time, up to 30 concurrent will be using the service for performing credit checks for customers.

What error handling mechanisms should be built to display an error to the agent when the credit verification process failed?

- A. In case the verification process is down, Use mock service to send the response to the agent.
- B. Handle verification process error in the Verification Webservice API in case there is a connection issue to the Webservice if it responds with an error.
- C. Handle integration errors in the middleware in case the verification process is down, then the middleware should retry processing the request multiple times.
- D. In case the verification process is down, use fire and forget mechanism instead of request and reply to allow the agent to get the response back when the service is back online.

Correct Answer: B

QUESTION 4

A US business-to-consumer (B2C) company is planning to expand to Latin America. They project an initial Latin American customer base of about one million, and a growth rate of around 10% every year for the next 5 years. They anticipate privacy and data protection requirements similar to those in the European Union to come into effect during this time. Their initial analysis indicates that key personal data is stored in the following systems:

1.
Legacy mainframe systems that have remained untouched for years and are due to be decommissioned.
2.
Salesforce Commerce Cloud Service Cloud, Marketing Cloud, and Community Cloud.
- 3.

The company's CIO tasked the integration architect with ensuring that they can completely delete their Latin American customer's personal data on demand. Which three requirements should the integration architect consider? Choose 3 answers

- A. Manual steps and procedures that may be necessary.
- B. Impact of deleted records on system functionality.
- C. Ability to delete personal data in every system.
- D. Feasibility to restore deleted records when needed.
- E. Ability to provide a 360-degree view of the customer.

Correct Answer: BCD

QUESTION 5

Northern Trail Outfitters needs to make synchronous callouts "available to promise" services to query product availability and reserve inventory during customer checkout process. Which two considerations should an integration architect make when building a scalable integration solution? Choose 2 answers

- A. The typical and worst-case historical response times.
- B. The number batch jobs that can run concurrently.
- C. How many concurrent service calls are being placed.
- D. The maximum query cursors open per user on the service.

Correct Answer: BD
