### QUESTION 1

You have a Microsoft 365 subscription.

You add a domain named contoso.com.

When you attempt to verify the domain, you are prompted to send a verification email to admin@contoso.com.

You need to change the email address used to verify the domain.

What should you do?

- A. From the domain registrar, modify the contact information of the domain
- B. Add a TXT record to the DNS zone of the domain
- C. Modify the NS records for the domain
- D. From the Microsoft 365 admin center, change the global administrator of the Microsoft 365 subscription

Correct Answer: A

The email address that is used to verify that you own the domain is the email address listed with the domain registrar for the registered contact for the domain.

### QUESTION 2

You have a data loss prevention (DLP) policy.

You need to increase the likelihood that the DLP policy will apply to data that contains medical terms from the International Classification of Diseases (ICD-9-CM). The solution must minimize the number of false positives.

Which two settings should you modify? To answer, select the appropriate settings in the answer area. NOTE: Each correct selection is worth one point.

Hot Area:

and ▾

Any of these ▾

Medical Terms

Sensitive information type

	Instance count		Match accuracy	
	min	max	min	max
International Classification of Diseases (ICD-9-CM)	1	any	50	100

Add ▾

Correct Answer:

## Content contains \*

Any of these ▾

### PII Identifiers

Sensitive information type

U.S. Social Security Number (SSN)

Instance count		Match accuracy	
min	max	min	max
1	any	50	100

Add ▾

and ▾

Any of these ▾

### Medical Terms

Sensitive information type

International Classification of Diseases (ICD-9-CM)

Instance count		Match accuracy	
min	max	min	max
1	any	50	100

Add ▾

You can tune your rules by adjusting the instance count and match accuracy to make it harder or easier for content to match the rules. Each sensitive information type used in a rule has both an instance count and match accuracy.

To make the rule easier to match, decrease the min count and/or increase the max count. You can also set max to any by deleting the numerical value.

To minimize the number of false positives, we need to increase the minimum match accuracy.

A sensitive information type is defined and detected by using a combination of different types of evidence. Commonly, a sensitive information type is defined by multiple such combinations, called patterns. A pattern that requires less evidence

has a lower match accuracy (or confidence level), while a pattern that requires more evidence has a higher match accuracy (or confidence level).

### QUESTION 3

#### HOTSPOT

Your network contains an on-premises Active Directory forest named contoso.com. The forest contains the users shown in the following table.

Name	Domain	User UPN suffix
User1	Contoso.com	Fabrikam.com
User2	East.contoso.com	Contoso.com

You create an Azure Active Directory (Azure AD) tenant named fabrikam.onmicrosoft.com.

You plan to sync the users in the forest to fabrikam.onmicrosoft.com by using Azure AD Connect.

Which username will be assigned to User1 and User2 in Azure AD after the synchronization? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

User1:

- User1@contoso.com
- User1@east.contoso.com
- User1@fabrikam.com
- User1@fabrikam.onmicrosoft.com

User2:

- User2@contoso.com
- User2@east.contoso.com
- User2@fabrikam.com
- User2@fabrikam.onmicrosoft.com

Correct Answer:

User1:

User2:

If you added the contoso.com and east.contoso.com domains as custom domains in Microsoft 365, then the users would be assigned their user principle names as Microsoft 365 usernames. However, the question does not state that you have added the domains as custom domains. Therefore, both users will use the default @fabrikam.onmicrosoft.com domain for their usernames.

#### QUESTION 4

You have three devices enrolled in Microsoft Intune as shown in the following table.

Name	Platform	BitLocker Drive Encryption (BitLocker)	Member of
Device1	Windows 10	Disabled	Group3
Device2	Windows 10	Disabled	Group2, Group3
Device3	Windows 10	Disabled	Group2

The device compliance policies in Intune are configured as shown in the following table.

Name	Platform	Require BitLocker	Assigned
Policy1	Windows 10 and later	Require	Yes
Policy2	Windows 10 and later	Not configured	Yes
Policy3	Windows 10 and later	Require	No

The device compliance policies have the assignment shown in the following table.

Name	Assigned to
Policy1	Group3
Policy2	Group2

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Hot Area:

### Answer Area

Statements	Yes	No
Device1 is compliant.	<input type="radio"/>	<input type="radio"/>
Device2 is compliant.	<input type="radio"/>	<input type="radio"/>
Device3 is compliant.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

### Answer Area

Statements	Yes	No
Device1 is compliant.	<input type="radio"/>	<input checked="" type="radio"/>
Device2 is compliant.	<input type="radio"/>	<input checked="" type="radio"/>
Device3 is compliant.	<input checked="" type="radio"/>	<input type="radio"/>

Device 1:

No because Device1 is in group3 which has Policy1 assigned which requires BitLocker.

Device 2:

No because Device2 is in group3 which has Policy1 assigned which requires BitLocker. Device2 is also in Group2 which has Policy2 assigned but the BitLocker requirement is not configured in Policy2.

Device3:

Yes because Device3 is in Group2 which has Policy2 assigned but the BitLocker requirement is not configured in Policy2.

## QUESTION 5

You have a Microsoft 365 subscription that contains a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. The tenant includes a user named User1.

You enable Azure AD Identity Protection.

You need to ensure that User1 can review the list in Azure AD Identity Protection of users flagged for risk. The solution must use the principle of least privilege.

To which role should you add User1?

- A. Compliance administrator
- B. Global administrator
- C. Owner
- D. Security administrator

Correct Answer: D

Either one of the following three roles can review the list in Azure AD Identity Protection of users flagged for risk:

1.  
Security Administrator
2.  
Global Administrator
3.  
Security Reader

Using the principle of least privilege, we should add User1 to the Security Administrator role.

Note:

There are several versions of this question in the exam. The question has three possible correct answers:

1.

Security Reader

2.

Security Administrator Global Administrator

Other incorrect answer options you may see on the exam include the following:

1.

Service Administrator.

2.

Reports Reader

3.

User Administrator
