### QUESTION 1

You have a Microsoft 365 subscription.

You configure a data loss prevention (DLP) policy.

You discover that users are incorrectly marking content as false positive and bypassing the DLP policy.

You need to prevent the users from bypassing the DLP policy.

What should you configure?

- A. actions
- B. exceptions
- C. incident reports
- D. user overrides

Correct Answer: D

A DLP policy can be configured to allow users to override a policy tip and report a false positive.

You can educate your users about DLP policies and help them remain compliant without blocking their work. For example, if a user tries to share a document containing sensitive information, a DLP policy can both send them an email

notification and show them a policy tip in the context of the document library that allows them to override the policy if they have a business justification. The same policy tips also appear in Outlook on the web, Outlook, Excel, PowerPoint, and

Word.

If you find that users are incorrectly marking content as false positive and bypassing the DLP policy, you can configure the policy to not allow user overrides.

### QUESTION 2

You have a Microsoft 365 subscription.

You view the service advisories shown in the following exhibit.

Home > Service health

Some services have posted advisories 2018-10-05 08:43(UTC) [View history](#)

Service	Status	Advisories
Office 365 Portal	Information icon	1 advisory
SharePoint Online	Information icon	1 advisory
Office Subscription	Checkmark icon	Service is healthy
Microsoft Intune	Checkmark icon	Service is healthy
Microsoft StaffHub	Checkmark icon	Service is healthy
Microsoft Teams	Checkmark icon	Service is healthy
Mobile Device Management for Office 365	Checkmark icon	Service is healthy
Azure Information Protection	Checkmark icon	Service is healthy
Exchange Online	Checkmark icon	Service is healthy

You need to ensure that users who administer Microsoft SharePoint Online can view the advisories to investigate health issues. Which role should you assign to the users?

- A. SharePoint administrator
- B. Message Center reader
- C. Reports reader
- D. Service administrator

Correct Answer: D

People who are assigned the global admin or service administrator role can view service health. To allow Exchange, SharePoint, and Skype for Business admins to view service health, they must also be assigned the Service admin role. For more information about roles that can view service health.

### QUESTION 3

Your network contains an Active Directory domain named contoso.com. The domain contains 1000 Windows 8.1 devices.

You plan to deploy a custom Windows 10 Enterprise image to the Windows 8.1 devices.

You need to recommend a Windows 10 deployment method.

What should you recommend?

- A. Wipe and load refresh
- B. Windows Autopilot

- C. a provisioning package
- D. an in-place upgrade

Correct Answer: A

To deploy a custom image, you must use the wipe and load refresh method. You cannot deploy a custom image by using an in-place upgrade, Windows Autopilot or a provisioning package.

#### QUESTION 4

Your company has a Microsoft 365 subscription.

You plan to move several archived PST files to Microsoft Exchange Online mailboxes.

You need to create an import job for the PST files.

Which three actions should you perform before you create the import job? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create a Microsoft Azure Storage account.
- B. From Security and Compliance, retrieve the SAS key.
- C. Run azcopy.exe to copy the PST files to Microsoft Azure Storage
- D. Use Microsoft Azure Storage Explorer to copy the PST files to Azure Storage.
- E. Create a PST import mapping file.

Correct Answer: BCE

The first step is to download and install the Azure AzCopy tool, which is the tool that you run in Step 2 to upload PST files to Office 365. You also copy the SAS URL for your organization. This URL is a combination of the network URL for the Azure Storage location in the Microsoft cloud for your organization and a Shared Access Signature (SAS) key. This key provides you with the necessary permissions to upload PST files to your Azure Storage location.

Now you're ready to use the AzCopy.exe tool to upload PST files to Office 365. This tool uploads and stores them in an Azure Storage location in the Microsoft cloud.

After the PST files have been uploaded to the Azure Storage location for your Office 365 organization, the next step is to create a comma-separated value (CSV) file that specifies which user mailboxes the PST files will be imported to. You'll submit this CSV file when you create a PST Import job.

#### QUESTION 5

Your company has a main office and 20 branch offices in North America and Europe. Each branch connects to the main

office by using a WAN link. All the offices connect to the Internet and resolve external host names by using the main office connections.

You plan to deploy Microsoft 365 and to implement a direct Internet connection in each office.

You need to recommend a change to the infrastructure to provide the quickest possible access to Microsoft 365 services.

What is the best recommendation to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. For all the client computers in the branch offices, modify the MTU setting by using a Group Policy object (GPO).
- B. In each branch office, deploy a proxy server that has user authentication enabled.
- C. In each branch office, deploy a firewall that has packet inspection enabled.
- D. In the branch offices, configure name resolution so that all external hosts are redirected to public DNS servers directly.

Correct Answer: D

Being a cloud service, Office 365 would be classed as an external host to the office computers.

All the offices connect to the Internet and resolve external host names by using the main office connections. This means that all branch office computers perform DNS lookups and connect to the Internet over the WAN link.

Each branch office will have a direct connection to the Internet so the quickest possible access to Microsoft 365 services would be by using the direct Internet connections. However, the DNS lookups would still go over the WAN links to main office. The solution to provide the quickest possible access to Microsoft 365 services is to configure DNS name resolution so that the computers use public DNS servers for external hosts. That way DNS lookups for Office 365 and the connections to Office 365 will use the direct Internet connections.
