QUESTION 4

An administrator is configuring a new FortiVoice system and is having trouble with outbound and external inbound calls. The network administrator has verified that Internet connectivity is stable and the FortiVoice system can reach the Internet. Local extension calls are also working without any issue.

Which two configurations are likely causing this issue? (Choose two.)

- A. Office Peers
- B. DID mapping
- C. VoIP Trunk
- D. Inbound call routing

Correct Answer: AB

QUESTION 5

Refer to the exhibit.

HA Configuration

Mode of operation: master

On failure: switch off

Shared password: change_me

Advanced options

HA base port: 20000

Heartbeat lost threshold: 30 seconds

Remote services as heartbeat: ☐

Call recoding sync: ☒

Apply Cancel

In the event of a failover, which statement about the configuration shown in the exhibit is true?

- A. Once the unit has recovered from failure the mode of operation changes to slave.
- B. Once the unit has recovered from failure it goes back to its programmed state of master.
- C. Once the unit has recovered from failure it stays in idle state until it is manually configured as master or slave.
- D. Once the unit has recovered from a failure it shuts down.

Correct Answer: B
