QUESTION 1

A company is running SAP on anyDB at a remote location that has slow and inconsistent internet connectivity. The company wants to migrate its system to AWS and wants to convert its database to SAP HANA during this process Because of the inconsistent internet connection the company has not established connectivity between the remote location and the company\\'s VPC in the AWS Cloud.

How should the company perform this migration?

A. Migrate by using SAP HANA system replication over the internet connection Specify a public IP address on the target system

B. Migrate by using SAP Software Update Manager (SUM) Database Migration Option (DMO) with System Move Use an AWS Snowball Edge Storage Optimized device to transfer me SAP export files to AWS

C. Migrate by using SAP HANA system replication with initialization through backup and restore Use an AWS Snowball Edge Storage Optimized device to transfer the SAP export files to AWS

D. Migrate by using SAP Software Update Manager (SUM) Database Migration Option (DMO) with System Move Use Amazon Elastic File System (Amazon EPS) to transfer the SAP export files to AWS

Correct Answer: A

QUESTION 2

An SAP solutions architect is designing an SAP HANA scale-out architecture for SAP Business Warehouse (SAP BW) on SAP HANA on AWS. The SAP solutions architect identifies the design as a three-node scale out deployment of x1e 32xlarge Amazon EC2 instances

The SAP solutions architect must ensure that the SAP HANA scale-out nodes can achieve the low-latency and high-throughput network performance that are necessary for node-to- node communication

Which combination of steps should the SAP solutions architect take to meet these requirements? (Select TWO.)

A. Create a cluster placement group Launch the instances into the cluster placement group

B. Create a spread placement group Launch the instances into the spread placement group

C. Create a partition placement group Launch the instances into the partition placement group

D. Based on the operating system version verify that enhanced networking is enabled on all the nodes

E. Switch to a different instance family that provides network throughput that is greater than 25 Gbps

Correct Answer: CE

QUESTION 3

A global enterprise is running SAP ERP Central Component (SAP ECC) workloads on Oracle in an on-premises environment. The enterprise plans to migrate to SAP S 4HANA on AWS. The enterprise recently acquired two other companies One of the acquired companies is running SAP ECC on Oracle as its ERP system The other acquired

company is running an ERP system that is not from SAP The enterprise wants to consolidate the three ERP systems into one ERP system on SAP S 4HANA on AWS Not all the data from the acquired companies needs to be migrated to the final ERP system The enterprise needs to complete this migration with a solution that minimizes cost and maximizes operational efficiency.

Which solution will meet these requirements?

A. Perform a lift-and-shift migration of all the systems to AWS Migrate the ERP system that is not from SAP to SAP ECC Convert all three systems to SAP S/4HANA by using SAP Software Update Manager (SUM) Database Migration Option (DMO) Consolidate all three SAP S4HANA systems into a final SAP and4HANAsystem Decommission the other systems

B. Perform a lift-and-shift migration of an the systems to AWS Migrate the enterprise\\'s initial system to SAP HANA, and then perform a conversion to SAP S/4HANA Consolidate the two systems from the acquired companies with this SAP S4HANA system by using the Selective Data Transition approach with SAP Data Management and Landscape Transformation (DMLT)

C. Use SAP Software Update Manager (SUM) Database Migration Option (DMO) with System Move to re-architect the enterprise initial system to SAP S\\'4HANA and to change the platform to AWS Consolidate the two systems from the acquired companies with this SAP S 4HANA system by using the Selective Data Transition approach with SAP Data Management and Landscape Transformation (DMLT)

D. Use SAP Software Update Manager (SUM) Database Migration Option (DMO) with System Move to re-architect all the systems to SAP S/4HANA and to change the platform to AWS Consolidate all three SAP S-4HANA systems two a final SAP S/4HANA system Decommission the other systems

Correct Answer: A

QUESTION 4

A company wants to migrate its SAP S/4HANA software from on premises to AWS in a few weeks An SAP solutions architect plans to use AWS Launch Wizard for SAP to automate me SAP deployment on AWS

Which combination of steps must the SAP solutions architect take to use Launch Wizard to meet these requirements? (Select TWO.)

A. Download the SAP software files from the SAP Support Portal Upload the SAP software files to Amazon S3 Provide the S3 bucket path as an input to Launch Wizard

B. Provide the SAP S-user ID and password as inputs to Launch Wizard to download the software automatically.

C. Format the S3 Tile path syntax according to the Launch Wizard deployment recommendation

D. Use an AWS CloudFormation template for the automated deployment of the SAP landscape

E. Provision Amazon EC2 instances Tag the instances to install SAP S\\'4HANA on them

Correct Answer: AD

QUESTION 5

A company is planning to migrate its SAP workloads to AWS. The company will use two VPCs One VPC will be for production systems and one VPC will be for non-production systems. The company will host the non-production systems and the primary node of all the production systems in the same Availability Zone.

What is the MOST cost-effective way to establish a connection between me production systems and the non-production systems?

A. Create an AWS Transit Gateway Attach the VPCs to the transit gateway Add the appropriate routes m the subnet route tables

B. Establish a VPC peering connection between the two VPCs Add the appropriate routes in the subnet route tables

C. Create an internet gateway in each VPC Use an AWS Site-to-Site VPN connection between the two VPCs Add the appropriate routes in the subnet route tables

D. Set up an AWS Direct Connect connection between the two VPCs Add the appropriate routes in the subnet route tables

Correct Answer: D
