-  **800,000+** Satisfied Customers

**QUESTION 1**

The administrator has deployed a third-party virtual appliance in the organization's vSphere environment and needs to use Update Manager to maintain the third-party appliance. How should the administrator accomplish this task with the least administrative effort?

- A. Add a new Download Source to Update Manager to obtain updates from the third party
- B. Manually download the third-party updates to Update Manager, which will then apply them to the appliance
- C. Obtain an update tool from the third party and use it to manage updates to the appliance
- D. Identify the third-party appliance from the supported list within Update Manager

Correct Answer: A

---

**QUESTION 2**

A customer needs to size a single backup appliance for backing up 3TB of data. There is no requirement for guest level backups of SQL and Exchange. What is the minimum VMware Data Protection solution and sizing that would fulfill the stated requirements?

- A. VMware Data Protection Advanced with a 4TB backup appliance
- B. VMware Data Protection with a 4TB backup appliance
- C. VMware Data Protection Advanced with a 3TB backup appliance
- D. VMware Data Protection with a 3TB backup appliance

Correct Answer: A

---

**QUESTION 3**

A customer needs to select an appropriate Path Selection Policy (PSP) for their storage array. There is no requirement for a preferred path. The policy should not select a new path unless the current one fails. Which PSP meets the requirement?

- A. Fixed
- B. Round Robin
- C. Most Recently Used
- D. Asymmetric Logical Unit Access

Correct Answer: C

---

## QUESTION 4

An organization wants to ensure that if a host in a High Availability (HA) cluster fails, critical virtual machines resume operation even if there are insufficient resources to continue to run all virtual machines in the cluster. Which HA setting should be configured to ensure the cluster operates as expected?

- A. VM restart priority
- B. Admission Control policy
- C. VM monitoring sensitivity
- D. das.checkVmStateDelay

Correct Answer: A

---

## QUESTION 5

The oncall system administrator has made a change on the ESXi host requiring a restart of the management network. Lockdown mode is enabled. Which action should the administrator take to restart the management network?

- A. Use the vSphere client to enable local authentication services, then logon directly to the ESXi Shell and run services mgmt-vmware restart.
- B. Use an SSH client to logon to the command line and run services mgmt-vmware restart.
- C. Use the vSphere client to enable the DCUI and then logon to the ESXi Shell and use the menu to restart the management network.
- D. Logon directly to the DCUI and use the menu to restart the management network.

Correct Answer: D
