-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

What are the benefits of using SSL to meet the company's compliance requirements?

- A. It eliminates the need to distribute an internal root certificate.
- B. It encrypts end-to-end traffic from remote users.
- C. It is required to enable the SSL Relay service.
- D. It provides secure internal and external network communication.

Correct Answer: D

QUESTION 2

Which three statements are true regarding the Radiology group? (Choose three.)

- A. Mobility is important to Radiology users.
- B. Mobility is unimportant to Radiology users.
- C. Virtualization resource requirements are high.
- D. Smooth Roaming is important to Radiology users.
- E. Virtualization resource requirements are moderate.
- F. Smooth Roaming is unimportant to Radiology users.

Correct Answer: BCD

QUESTION 3

Scenario: The architect for the company has identified that virtualizing the entire server infrastructure will provide the best return on investment (ROI) and lowest maintenance costs for the new infrastructure. In order to proceed with this recommendation, a monitoring strategy must be put in place to ensure that the virtualization platform does NOT become overloaded.

Which virtualization component should an architect monitor to identify virtual desktop bottlenecks?

- A. XenServer hosts
- B. Delivery Controllers
- C. Provisioning Services servers
- D. Server OS machines

Correct Answer: A

QUESTION 4

How should the components be set up for this environment?

- A. Configure NetScaler high-availability pairs at each site. Place the StoreFront servers and Delivery Controllers in the internal network.
- B. Configure one NetScaler cluster at each site. Place the StoreFront servers and Delivery Controllers in the internal network.
- C. Configure NetScaler high-availability pairs at each site. Place the StoreFront servers in the DMZ and the Delivery Controllers in the internal network.
- D. Configure one NetScaler cluster at each site. Place the StoreFront servers in the DMZ and the Delivery Controllers in the internal network.

Correct Answer: A

QUESTION 5

Why does using StoreFront logs help the company comply with its security policy?

- A. Because they are centralized, industry-standard logs that are easily queried
- B. Because they use password-protection for added security
- C. Because they contain detailed records of user authentication activity
- D. Because they collect data from multiple devices

Correct Answer: C

QUESTION 6

What are the benefits of using a Hosted VDI environment with App-V packages?

- A. It retains the single image management function while allowing users to install applications.
- B. It provides a high level of security while allowing user customization.
- C. It has a low storage performance requirement and high user density.
- D. It delivers low-cost and high application compatibility.

Correct Answer: D

QUESTION 7

What are the benefits of using a hosted shared environment?

- A. It retains the single image management function while allowing users to install applications.
- B. It provides a high level of security while allowing user customization.
- C. It has a low storage performance requirement and high user density.
- D. It delivers low cost and high application compatibility.

Correct Answer: C

QUESTION 8

The company's security officer has stated that for compliance reasons, all internal and external network traffic must be encrypted. How should IPsec be implemented?

- A. By using NetScaler
- B. By implementing secure delivery groups
- C. By implementing an Active Directory group policy
- D. By configuring a local IPsec policy in the master image

Correct Answer: C

QUESTION 9

Individual users in the Radiology group want to install a variety of third-party tools to analyze the images they use. They also need to be able to analyze a centrally stored image database that they access remotely.

Which XenDesktop (FlexCast) model should the architect recommend to achieve this goal?

- A. Hosted shared
- B. Hosted VDI
- C. Streamed VHD
- D. Local VM

Correct Answer: B

QUESTION 10

Why should memory consumption above 90% be used to identify bottlenecks?

- A. At least 20% of resources should be available at all times.
- B. XenServer host CPU utilization above 90% causes excessive paging.
- C. XenServer host reserves 20% of all memory for paging.
- D. Running XenCenter will consume 20% of all memory resources.

Correct Answer: A

QUESTION 11

Why does installing Windows applications into an image help manage the image release process?

- A. Because it reduces application deployment time
- B. Because it standardizes the application deployment process
- C. Because it facilitates the use of App-V packages
- D. Because it automatically deploys the latest drivers and patches

Correct Answer: A

QUESTION 12

How should the architect recommend the NetScalers be implemented to increase site resiliency?

- A. Configure GSLB for user connectivity
- B. Create a cluster instance that includes all three appliances.
- C. Configure a backup vServer.
- D. Configure failover sites within the NetScaler.

Correct Answer: A

QUESTION 13

What are the benefits of using Streamed VHD?

- A. It retains the single image management function.
- B. It provides a high level of security.
- C. It has a low storage performance requirement.

D. It allows users to install applications.

Correct Answer: A

QUESTION 14

How can the architect identify if the Delivery Controller is the source of a bottleneck?

- A. Identify excessive memory and network utilization.
- B. Identify excessive CPU consumption.
- C. Identify excessive disk and network I/O.
- D. Identify excessive disk I/O and page file utilization.

Correct Answer: B

QUESTION 15

What are the benefits of using a Hosted VDI environment with Personal vDisk?

- A. It retains the single image management function while allowing users to install applications.
- B. It provides a high level of security while allowing user customization.
- C. It has a low storage performance requirement and high user density.
- D. It retains the single image management function yet allows application compatibility.

Correct Answer: A

QUESTION 16

Why should disk I/O and page file utilization be used to identify bottlenecks?

- A. High disk I/O and page file utilization of the Delivery Controller can indicate a high volume of user logons, indicating that the server may NOT have sufficient resources to handle the load.
- B. High disk I/O and page file utilization on the Delivery Controller can indicate that the target device will encounter delays when mounting new vDisks.
- C. High disk I/O and page file utilization of the Delivery Controller may indicate that a high number of processor-intensive applications are being utilized by the virtual desktop users.
- D. High disk I/O and page file utilization of the Delivery Controller can indicate the presence of a virus or malware.

Correct Answer: C

QUESTION 17

Which action should an architect avoid recommending when designing a monitoring solution?

- A. Installing vendor-supplied tools to monitor physical hardware
- B. Installing Command Center to monitor NetScaler appliances
- C. Installing agents onto NetScaler appliances to monitor utilization
- D. Installing Citrix Director to monitor the XenDesktop environment

Correct Answer: C

QUESTION 18

How should the components be set up for this environment?

- A. Configure NetScaler high availability pair. Place the StoreFront servers and Delivery Controllers in the internal network.
- B. Configure NetScaler cluster. Place the StoreFront servers and Delivery Controllers in the internal network.
- C. Configure NetScaler high availability pair. Place the StoreFront servers in the DMZ and the Delivery Controllers in the internal network.
- D. Configure NetScaler cluster. Place the StoreFront servers in the DMZ and the Delivery Controllers in the internal network.

Correct Answer: A

QUESTION 19

Scenario: The company is designing a cost-efficient environment for the call center workers. The IT department is replacing the existing thin clients with newer models. How should the architect recommend that the Synchronizer be deployed?

- A. By deploying a Hyper-V virtual appliance
- B. By installing the Synchronizer software on a Hyper-V server
- C. By installing a Synchronizer virtual appliance on XenServer
- D. By booting from the Synchronizer ISO image

Correct Answer: C

QUESTION 20

The architect recommended pooled desktop OS machines with Personal vDisks for the Nurses, Imaging, and Radiology user group. How should an engineer implement antivirus software on these desktop OS machines?

- A. Install the antivirus software into the base image.
- B. Deploy the antivirus package as an App-V application.
- C. Deploy the antivirus software through a Group Policy startup script.
- D. Install the antivirus software in the master Personal vDisk as a user-installed application.

Correct Answer: A

QUESTION 21

Why should the two NetScalers be located at the London datacenter?

- A. Because it allows New York and Hong Kong to fail over to the London datacenter
- B. Because it provides secure remote access
- C. Because two components allow for increased user performance
- D. Because it allows for centralized management

Correct Answer: A

QUESTION 22

Scenario: The company is designing a cost-efficient environment for the call center workers. The IT department is replacing the existing thin clients with newer models. What are the benefits of using Hosted VDI and manually installing the operating system?

- A. Highest user density and lowest cost
- B. Highest level of user personalization
- C. Lowest storage performance requirement and highest user density
- D. Lowest cost and highest application compatibility

Correct Answer: B

QUESTION 23

Which solution meets the criteria for reducing the general IT costs for the Research and Training user group to access their applications?

- A. VM Hosted applications

- B. Streamed server OS machines
- C. Dedicated desktop OS machines
- D. Pooled desktop OS machine with Personal vDisk

Correct Answer: B

QUESTION 24

How should the architect specify that the Configuration Logging database be queried?

- A. By using the Citrix Director console
- B. By using SQL Management Studio
- C. By using SQL Reporting Services
- D. By using PowerShell

Correct Answer: B

QUESTION 25

Scenario: The company is designing a cost-efficient environment for the call center workers. The IT department is replacing the existing thin clients with newer models. What are the benefits of using Hosted VDI with Provisioning Services?

- A. Highest user density and lowest cost
- B. Highest level of user personalization
- C. Rapid provisioning and highest user density
- D. Low cost and highest application compatibility

Correct Answer: C

QUESTION 26

Why is Provisioning Services technology the best image management process design for this environment?

- A. This design provides a centralized image management process.
- B. This design reduces the storage footprint.
- C. This design eliminates network traffic.
- D. This design reduces the infrastructure server requirement.

Correct Answer: A

QUESTION 27

Which tool should the architect use in preparation for migration to Windows Server 2012 to determine application compatibility and suitability for virtualization?

- A. AppDNA
- B. App-V Sequencer
- C. EdgeSight for End Points
- D. Windows Upgrade Advisor

Correct Answer: A

QUESTION 28

How should Provisioning Services be used to meet the requirements of the imaging management process for this environment?

- A. Deploy two Provisioning Services servers for each datacenter. Install a new Windows image utilizing a XenServer virtual machine and prepare it as the master image that includes the delivery agent
- B. Deploy two Provisioning Services servers for each datacenter. Install a new Windows image utilizing a XenServer virtual machine and prepare it as the master image and install the Target Device software
- C. Deploy one Provisioning Services server for each datacenter. Install a new Windows image utilizing a XenServer virtual machine and prepare it as the master image and install the delivery agent. Convert the virtual machine image to a template.
- D. Deploy one Provisioning Services server for each datacenter. Install a new Windows image utilizing a XenServer virtual machine and prepare it as the master image and install the delivery agent. Copy the virtual machine image using FastClone

Correct Answer: A

QUESTION 29

Why does using hypervisor templates help manage the image release process?

- A. Because they automatically upgrade virtual desktops to the latest operating system version
- B. Because they provide centralized, automated single image management
- C. Because they facilitate consistent deployment of base images
- D. Because they can be stored on shared or local storage

Correct Answer: C

QUESTION 30

Why does centralizing volume activation help manage the image release process?

- A. Because it reduces licensing administration
- B. Because it helps manage version control
- C. Because it automates the license download process
- D. Because it enables use of Multiple Activation Keys

Correct Answer: A
