QUESTION 1

Scenario: An administrator created a single vDisk in the Provisioning Services Console that will be delivered to multiple target devices. The operating system must save user changes to applications. Which two options did the administrator select while preparing the vDisk? (Choose two.)

- A. Private Image mode
- B. Cache in Device RAM
- C. Standard Image mode
- D. Cache on Hard Drive Persistent

Correct Answer: CD

QUESTION 2

Scenario: An administrator tries to start a virtual machine on a host that has an NFS storage repository. The virtual machine gives the error "This virtual machine needs storage that cannot be seen from the server." Which action, within XenCenter, can the administrator take on the NFS storage repository to correct this issue?

- A. Repair
- B. Forget
- C. Detach
- D. Set as default

Correct Answer: A

QUESTION 3

Scenario: An administrator needs to ensure that all virtual machine traffic transmits over a specified VLAN. The XenServer host has two network interface cards, one for management and the other for virtual machine traffic. Which network type must the administrator create on a XenServer host to allow access to the specified VLAN?

- A. Bonded
- B. External
- C. Cross-server private
- D. Single-server private

Correct Answer: B

QUESTION 4

An administrator needs to export a virtual machine to an NFS share mounted on a XenServer host.

Which xe CLI command does the administrator need to execute from a remote machine to perform the virtual machine export?

- A. `xe vm-export -h filename=`
- B. `xe vm-export -h -u -pw vm=`
- C. `xe vm-export -h -u -pw filename=`
- D. `xe vm-export -h -u -pw vm= filename=`

Correct Answer: D

QUESTION 5

An administrator is planning to apply an update that has already been downloaded to a XenServer host in production. What is the next step that the administrator needs to take in the update process?

- A. Restart the host.
- B. Generate the UUID for the patch.
- C. Specify the UUIDs of the host and the patch.
- D. Shut down, suspend or migrate the virtual machines running on the host.

Correct Answer: D

QUESTION 6

Scenario: An administrator is in charge of distributing streamed Windows desktops to users using Provisioning services. Users have reported that they CANNOT access any printers while using the streamed desktops. The administrator has confirmed local printers are installed in the base image.

What could be causing this issue?

- A. Printer drivers are NOT configured.
- B. Network printers are NOT assigned to the users.
- C. Active Directory printers are assigned to the users.

D. Printer Management is enabled in the vDisk properties.

Correct Answer: D

QUESTION 7

An administrator needs to throttle traffic from the virtual print server because it has been impacting all virtual machines on the network. On which object should the QoS policy be configured?

- A. VM
- B. Global
- C. Server
- D. Network

Correct Answer: A

QUESTION 8

An administrator was given new security rules and now needs to remove specific permissions from the users in the VM Admin Role Based Access Control group. How can the administrator remove the specific permissions from the VM Admin user group?

- A. Reset the VM Admin user group back to the default permissions.
- B. Delete the registry key that applies to the specific permissions that need to be removed.
- C. Run the `xe subject-role-remove uuid= role-name=vm.pool_migrate XenServer` command.
- D. Remove the specific permissions from the Active Directory user group associated with the VM Admin user group.

Correct Answer: C

QUESTION 9

An administrator needs to configure a Provisioning services environment for Microsoft volume license management. Which properties could the administrator configure to accomplish this task?

- A. Farm
- B. vDisk
- C. Server

D. Target device

Correct Answer: B

QUESTION 10

Scenario: An administrator manages four XenServer hosts in a resource pool. To increase capacity, the administrator purchased one new host, which is a different CPU model, but from the same manufacturer. The administrator CANNOT add the new server to the existing pool.

What does the administrator need to use to force the host to join the existing pool?

- A. Command line
- B. Maintenance Mode
- C. Add to Pool Wizard
- D. Add Server Wizard

Correct Answer: A

QUESTION 11

Scenario: After a host failure, an administrator rebuilt the host and restored the XenServer pool database. However, all virtual machines are registered as suspended.

Which command can the administrator use to correct the situation?

- A. `xe vm-reboot vm=vm_name`
- B. `xe vm-shutdown vm=vm_name`
- C. `xe vm-unpause vm=vm_name --multiple`
- D. `xe vm-reset-powerstate vm=vm_name -force`

Correct Answer: D

QUESTION 12

An administrator is deploying Provisioning services in a XenServer environment.

Which DHCP option must the administrator enable so that the target device will retrieve the boot file by name from the TFTP server?

- A. 64

- B. 65
- C. 66
- D. 67

Correct Answer: D

QUESTION 13

Scenario: An administrator manages a XenServer resource pool consisting of six XenServer hosts. A Windows XP virtual machine runs on a shared NFS storage repository. The administrator needs to migrate the Windows XP virtual machine to another host but CANNOT.

What must the administrator do to migrate the Windows XP virtual machine?

- A. Install XenServer Tools on the virtual machine.
- B. Suspend and then migrate the virtual machine.
- C. Enable multipathing on the virtual machine hard drive.
- D. Place the virtual machine on shared Fibre Channel or iSCSI storage repository.

Correct Answer: A

QUESTION 14

Scenario: An administrator needs to install Windows Server 2008 R2 on a new virtual machine. The Windows Server 2008 R2 ISO file is located on a Windows share. Which storage repository does the administrator need to create to be able to mount the ISO file to the new virtual machine?

- A. iSCSI
- B. CIFS
- C. NFS ISO
- D. StorageLink

Correct Answer: B

QUESTION 15

Which item in the Provisioning Services Console will the administrator need to configure to add a machine account from

the Active Directory domain?

- A. Farm
- B. vDisk
- C. Server
- D. Target Device

Correct Answer: D

QUESTION 16

Scenario: An administrator receives a change request to enable high availability in a resource pool consisting of six XenServer hosts. When the administrator is executing the change request, an error message indicates there is an issue with enabling high availability.

What could be causing this issue?

- A. NTP is NOT specified.
- B. Hosts have different CPUs.
- C. Active Directory authentication is NOT configured.
- D. The storage repository disk space for heart-beat is insufficient.

Correct Answer: D

QUESTION 17

What can the administrator create to configure a high availability plan for a group of mission critical virtual machines in a single pool?

- A. Site
- B. vApp
- C. Folder
- D. Secondary Site

Correct Answer: B

QUESTION 18

Scenario: An administrator manages six XenServer hosts in a resource pool in which high availability is enabled. The administrator is notified that host fencing occurred. Which two reasons could be causing the issue? (Choose two.)

- A. CPU utilization reached 90%.
- B. The resource pool is overcommitted.
- C. The shared storage repository was disconnected.
- D. There was a XenServer management network outage.

Correct Answer: CD

QUESTION 19

Scenario: An administrator needs to configure a shared storage repository for a XenServer pool. The storage team has provisioned 500 GB of storage space on a NetApp SAN to be used for the XenServer storage repository. Thin provisioning and data deduplication were defined as requirements for the storage repository and must be enabled using XenCenter.

Which type of storage repository will allow the administrator to meet the specified requirements?

- A. NFS VHD
- B. Hardware HBA
- C. Software iSCSI
- D. Advanced StorageLink

Correct Answer: D

QUESTION 20

Scenario: An administrator is planning to introduce 100 new virtual machines into the environment. The administrator plans to use XenServer templates and duplication mechanisms. What must the administrator consider when deciding between the full copy and fast clone duplication mechanisms?

- A. A template needs to be copied before it can be fast cloned.
- B. A virtual machine that is duplicated using the full copy method may impact disk performance.
- C. A virtual machine that is duplicated using the fast cloned method may impact disk performance.
- D. A template created on local storage can be duplicated by using the full copy method by any host in the pool.

Correct Answer: C
