#### QUESTION 10

Scenario: A network engineer has installed a NetScaler system into their corporate DMZ and would like to provide access to a web server on the internal LAN. The web server will be accessed by external users through the Netscaler. The

firewall administrator has opened the relevant ports required on the external and the internal firewall. The engineer

notices that the virtual server and services representing the web server are down and the internal web server does NOT

appear accessible from the NetScaler.
