QUESTION 1

What is required prior to configuring and enabling a SAML Identity Provider?

- A. A SAML 2.0 Identity Provider
- B. A Certificate Private Key
- C. A SAML 1.1 Identity Provider
- D. A configured LDAP connection

Correct Answer: A

QUESTION 2

A cloud provider wants to adopt VMware Cloud Foundation for management and resource clusters and is planning on having separate management and user workload domains.

Which architecture achieves this goal?

- A. Multi-instance Management
- B. Standard
- C. Stretched
- D. Consolidated

Correct Answer: B

QUESTION 3

Which statement is true regarding VMware Cloud Director App Launchpad?

- A. It only provides a pre-packaged public catalog that allows Service Providers the ability to pre-configure sizing templates for application deployment, simplifying the tenant experience.
- B. It only provides pre-packaged, publicly available applications from the VMware Marketplace that must be configured every time they are deployed.
- C. It provides a pre-packaged public and custom application catalog that allows Service Providers the ability to pre-configure sizing templates for application deployment, simplifying the tenant experience.
- D. It provides both pre-packaged, publicly available applications from the VMware Marketplace as well as custom-build applications, but the properties must be configured by the tenant every time they want to deploy one.

Correct Answer: B

QUESTION 4

The runtime lease of a virtual machine is about to expire. The administrator would like to extend the lease time.

Which action should be taken to complete this task?

- A. Renew the lease from the vApp action menu.
- B. Extend the storage lease, and runtime will automatically be extended.
- C. Use the /api/renewlease endpoint to define a new lease time.
- D. Renew the VM lease only after renewing the vApp lease.

Correct Answer: A

QUESTION 5

Which statement is accurate for virtual machines that need to be customized by VMware Cloud Director?

- A. It must use the VMware Tools for VMware Cloud Director.
- B. It should use only the tools provided by Windows operating system.
- C. It must be converted into VMware Cloud Director disk format first.
- D. It should have the latest VMware Tools installed.

Correct Answer: A

QUESTION 6

What is the default user account for managing VMware vCloud Meter service and viewing log files in the VMware vCloud Usage Meter web interface?

- A. imauditor
- B. root
- C. usagemeter
- D. admin

Correct Answer: C

QUESTION 7

An individual is logged into the VMware Cloud Director tenant portal as organization administrator and would like to create a direct organization virtual data center network. The individual, however, receives a message that insufficient rights are held.

Which role is needed to complete this task?

- A. vApp author
- B. System administrator
- C. Catalog author
- D. Tenant administrator

Correct Answer: B

QUESTION 8

An administrator is configuring a load balancer for multiple VMware Cloud Director appliances for the console proxy.

Which port number should the administrator use?

- A. 443
- B. 902
- C. 8443
- D. 5480

Correct Answer: C

QUESTION 9

A system administrator creates a common catalog to be used by all customers. For availability purposes, the catalog will be consumed by a different VMware Cloud Director instance in a different country.

Which catalog setting enables the catalog to be shared across VMware Cloud Director instances?

- A. Published catalog
- B. Subscribed catalog
- C. Content library catalog
- D. Shared catalog

Correct Answer: D

QUESTION 10

Which statement is true about a VMware Cloud Director server group architecture?

- A. Mixed VMware Cloud Director installations on Linux and appliance deployments in one server group are supported.

B. Mixed VMware Cloud Director installations on Linux and appliance deployments in one server group are not supported.

C. Mixed VMware Cloud Director installations on Linux and appliance deployments in one server group are only supported when the primary cell is an appliance.

D. Mixed VMware Cloud Director installations on Linux and appliance deployments in one server group are only supported when the primary cell is a Linux cell.

Correct Answer: B
