QUESTION 1

How does HP Service Virtualization improve software delivery?

- A. By making virtualization a standard part of the testing process, designers ensure that developers are on hand to assist in case anything goes wrong during regression testing.
- B. By virtualizing services when needed, test designers can automate steps, reuse test components, and validate modern mobile and composite applications at a faster rate
- C. By virtualizing services, the number of people needed to conduct functional or regression testing of the software is reduced
- D. By introducing virtualization, stakeholders are assured that the IT organization's goals are clearly aligned with the goals of the business.

Correct Answer: A

QUESTION 2

How does the HP Quality Management solution help customers?
