QUESTION 1

Which information can the administrator use to identify iSCSI nodes?

- A. MAC address
- B. IQN
- C. WWN
- D. LUN ID

Correct Answer: B

QUESTION 2

A vSphere administrator needs to temporarily disable DRS on a cluster containing a resource pool hierarchy. Which procedure should the administrator follow to preserve the resource pool hierarchy while DRS is disabled?

- A. Move the resource pool hierarchy out of the cluster prior to disabling DRS.
- B. Save the resource pool hierarchy to the administrator's local machine prior to disabling DRS.
- C. Backup the vCenter Server database and restore the database after re-enabling DRS.
- D. Create a new cluster and move the resource pool hierarchy to the new cluster prior to disabling DRS.

Correct Answer: B

QUESTION 3

An administrator needs to manage a virtual machine that cannot be accessed directly from an external network. Which solution should the administrator choose?

- A. Power off the virtual machine and use the vSphere Web Client to open a console to the virtual machine.
- B. Install the Client Integration Plug-in in the Web browser and open a console to the running virtual machine.
- C. Install the DCUI plug-in in the Web browser and open a console to the running virtual machine.
- D. Power off the virtual machine, install the Client Integration plug-in, and open a console to the virtual machine.

Correct Answer: B

QUESTION 4

A vSphere administrator is performing maintenance on a group of ESXi 5.5 hosts when an error message displays indicating that the ramdisk is full. The two hosts reporting the problem were deployed with Auto Deploy.

What should the administrator do to resolve this issue?

- A. Redirect host logs to an NFS store
- B. Disable the System Logs through the host DCUI
- C. Decrease the maximum host log file size to 10240KB
- D. Move the ramdisk to an SSD drive

Correct Answer: A

QUESTION 5

A developer needs to create a multi-tier development stack for a home lab.

Which vSphere product will support the architecture required for the least software cost?

- A. vSphere Hypervisor
- B. vSphere Essentials
- C. VMware Player
- D. VMware Workstation

Correct Answer: A

QUESTION 6

An administrator receives the following error message: Unmanaged I/O workload detected on shared datastore. Which vSphere feature is the likely source of this error?

- A. Network I/O control
- B. Storage I/O control
- C. Storage DRS
- D. HA datastore heartbeats

Correct Answer: B

QUESTION 7

An administrator is deploying vSphere using a NAS device as the shared storage system.

The administrator has already created a VMkernel port, enabled the NFS client, and configured a mount point accessible to the hosts.

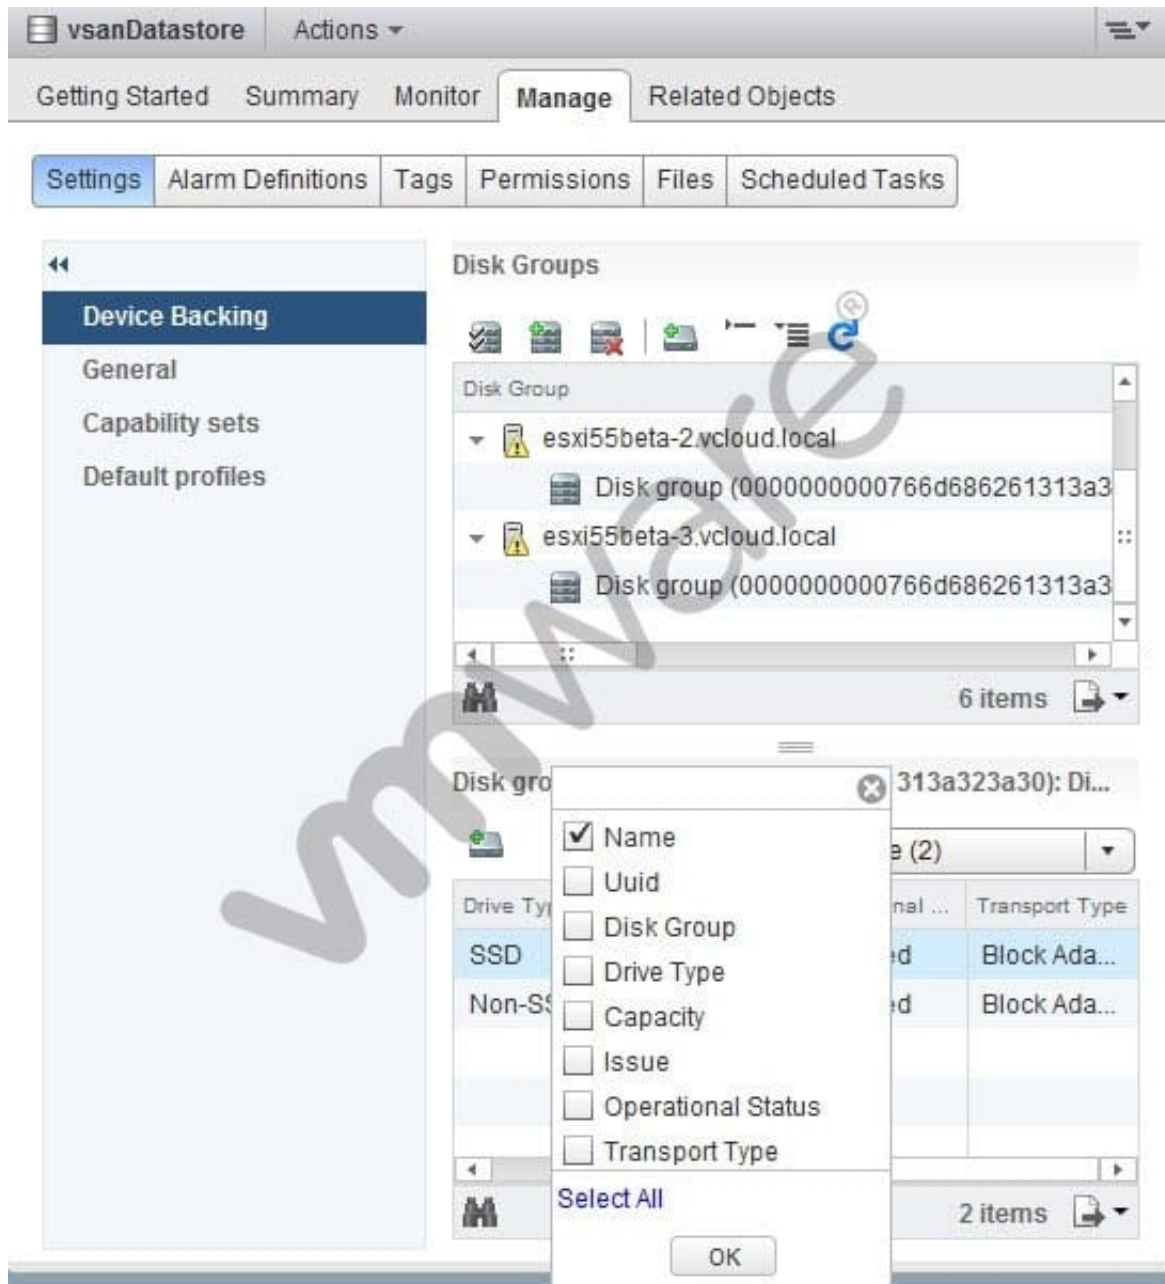

Which additional configuration is required before the datastore can be used to create virtual machines?

- A. The ESXi hosts must have root access to the datastore.
- B. The NAS must support NFS version 4.
- C. Port binding must be configured on the VMkernel port.
- D. The MTU on the VMkernel port must be set to 9000.

Correct Answer: A

QUESTION 8

-- Exhibit -

-- Exhibit -Which field should an administrator add to a Virtual SAN Disk Group under the Device Backing settings to monitor the health of disks in the Disk Group?

- A. Issue
- B. Operational Status
- C. Capacity
- D. Transport Type

Correct Answer: A

QUESTION 9

A vSphere administrator deleted a vApp from disk. A second administrator needs the virtual machines that were contained in the vApp. What should the first administrator do to make the virtual machines available?

- A. Recover the virtual machines from backup
- B. Add the virtual machines back into inventory
- C. Undelete the vApp
- D. Recover the virtual machines from Stranded Items

Correct Answer: A

QUESTION 10

An administrator using vCenter Operations Manager is viewing the health of an ESXi host in the environment. There have NOT been any reported outages or issues with the ESXi host, but the administrator needs to determine if the host is behaving normally.

Which minor badge should the administrator investigate to determine this information?

- A. Faults
- B. Anomalies
- C. Stress
- D. Health

Correct Answer: B

QUESTION 11

A vSphere administrator needs a way of sending noncritical ESXi events to a remote server. Due to budget constraints, no additional costs should be incurred. Which tool will best meet this requirement?

- A. vSphere Syslog Collector
- B. vSphere ESXi Dump Collector
- C. vSphere vCenter Log Insight
- D. vSphere Management Appliance

Correct Answer: A

QUESTION 12

An ESXi 5.x host disconnects within 60 seconds after the administrator adds it to the vCenter Server inventory. The administrator determines that the issue could be related to a networking problem. Which networking port should the administrator check for connectivity from the host to vCenter Server?

- A. 902
- B. 903
- C. 443
- D. 9443

Correct Answer: A

QUESTION 13

A vSphere administrator configures a preferred heartbeat datastore in an HA/DRS cluster configuration. The vCenter Server identifies an alternative preferred datastore. Why would vCenter Server identify an alternative preferred datastore over the administrator's preference?

- A. The selected datastore contains powered-on virtual machines.
- B. The selected datastore is formatted with a 1 MB block size.
- C. The selected datastore is an NFS datastore.
- D. The selected datastore is not accessible to all of the hosts.

Correct Answer: D

QUESTION 14

-- Exhibit -

-- Exhibit -The vCenter Operations Manager dashboard is showing Health issues associated with the selected virtual machine. There have been no availability or configuration issues with the virtual machine, and the workload badge is still green:

How should an administrator resolve this issue?

- A. Select the Anomalies badge to identify the cause of the abnormal behavior, then take appropriate action.
- B. Select the Stress badge to identify the cause of the increased stress, then take appropriate action.
- C. Select the Risk badge, identify the host at risk, and migrate the VM to a host with more resources.
- D. Select the Risk badge to identify how much time is remaining before CPU resources are gone, then assign more resources.

Correct Answer: A

QUESTION 15

What should an administrator do to identify compliance for virtual machine storage performance?

- A. Create a Storage Policy and apply it to the virtual machine
- B. Create Storage Capabilities and apply one or more capabilities to the virtual machine
- C. Create a Storage Policy and apply it to the datastore containing the virtual machine

D. Create Storage Capabilities and apply one or more capabilities to the datastore containing the virtual machine

Correct Answer: A
